Welcome

It might be easier to say what this guide isn't, rather than what it is. It isn't an in depth look at every single function available within the WordPress dashboard. Nor is it a guide to help you develop or modify WordPress themes. My aim is to create a simple WordPress guide that will help you to get an understanding of how you use the various features within the WordPress Dashboard to keep your site or blog updated.

If you're looking for more in-depth knowledge, there are heaps of articles in the [WordPress Codex](#) that go into more detail. This is great if you want to get really involved in developing your own WordPress theme or modifying your site with plugins, but it can be a bit daunting for those users who just want a simple guide to using the Content Management side of WordPress or just need to update their site pages every so often.

Introduction

WordPress is an [Open Source](#) software system used by millions of people around the world to create beautiful websites and blogs. It is completely customisable by the use of [themes](#) and [plugins](#).

“WordPress is web software you can use to create a beautiful website or blog. We like to say that WordPress is both free and priceless at the same time.”

Themes can be easily downloaded from the official WordPress site or from hundreds of other places around the web. The same goes with plugins, which are used to extend the functionality of your WordPress site.

As well as being a fantastic blogging and content management system, one of the huge benefits is the wealth of information out there. There’s a great community of people behind the design & development of the WordPress system itself. People from all over the world contribute their time, knowledge and skill to keeping WordPress updated and secure.

There’s also a huge number of designers, developers & bloggers who share their knowledge through blog posts, tutorials, reviews, videos and the creation of thousands of themes & plugins.

WordPress powers a staggering amount of websites. In fact, it powers over 29% of the whole web! Everything from personal blogs to large corporate websites. The following are just a very few examples of the millions of diverse sites powered by WordPress...

Women’s National Basketball Association (WNBA) – <http://www.wnba.com>

The Women’s National Basketball Association (WNBA) was founded in 1996, as the women’s counterpart to the National Basketball Association (NBA).

BBC America – <http://www.bbcamerica.com>

Presenting Britain’s best shows and groundbreaking American originals, BBC America is home to brilliant television from both sides of the pond.

The National Puerto Rican Day Parade – <http://www.nprdpinc.org>

The National Puerto Rican Day Parade in NYC is the largest parade in the country. The National Puerto Rican Day celebrates and honours the leaders, educators, artists, and celebrities that have left a cultural footprint on this nation.

Felicia Day – <http://feliciday.com>

Felicia Day is a professional actress who has appeared in numerous television shows including, *Buffy the Vampire Slayer*, *Supernatural* and *Eureka*. Felicia is best known for her work in the web video world. She costarred in Joss Whedon's Emmy Award-winning Internet musical, *Dr. Horrible's Sing-Along Blog*. She also created and starred in the hit web series *The Guild*.

The Official Star Wars Blog – <http://www.starwars.com/news>

Star Wars is an American epic space opera franchise conceived by George Lucas. The first film in the franchise was originally released on May 25, 1977, by 20th Century Fox, and became a worldwide pop culture phenomenon. Star Wars is one of the most popular movie series of all time and the series' official blog is powered by WordPress.

thisisFINLAND – <http://finland.fi>

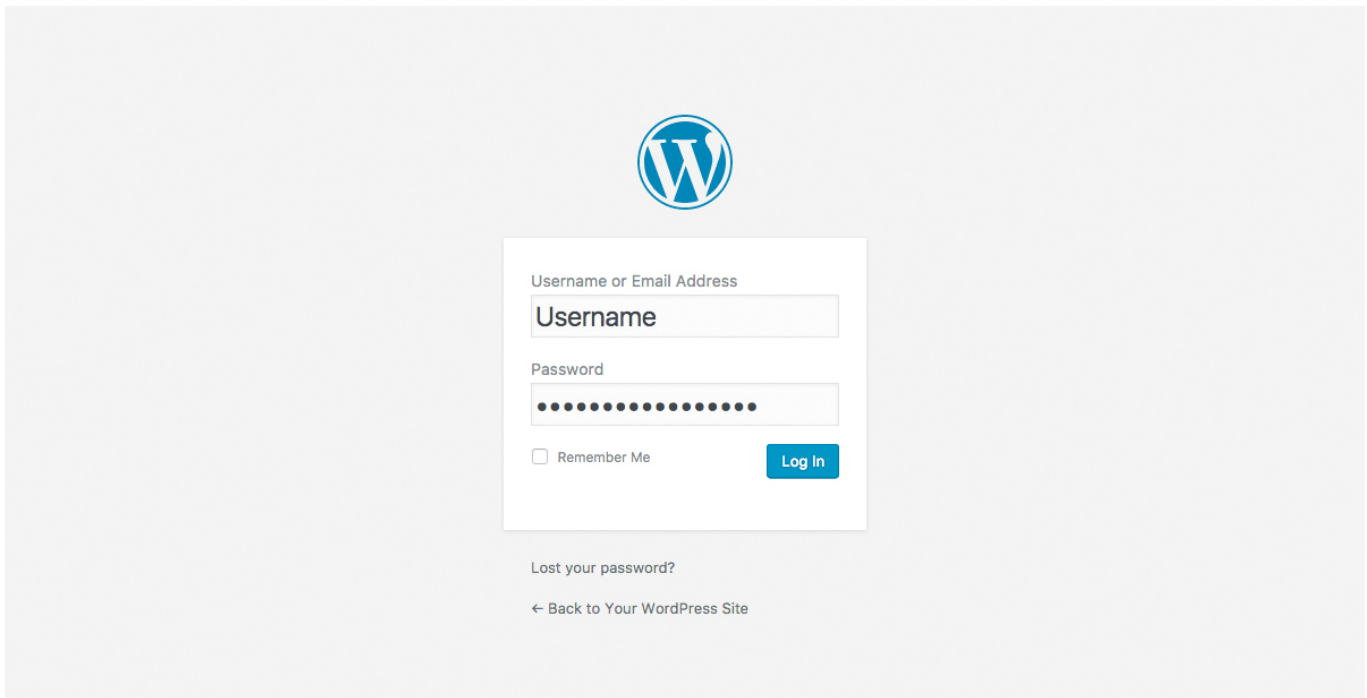

thisisFINLAND forms an attractive window on Finland for everyone interested in our country, its culture and its people. Produced by the Ministry for Foreign Affairs of Finland and published by the Finland Promotion Board, thisisFINLAND was originally established in 1995 as Virtual Finland.

Ladies Learning Code – <http://ladieslearningcode.com>

A new Toronto-based collective of women working to empower everyone to feel comfortable learning basic, beginner-friendly technical skills in a social, collaborative way.

Login

Before you can make any changes to your site, you will need to log in. The login for your site is typically found at the following URL - <http://your-wordpress-site.com/wp-admin>. Obviously, replace *your-wordpress-site.com* with your actual domain name.

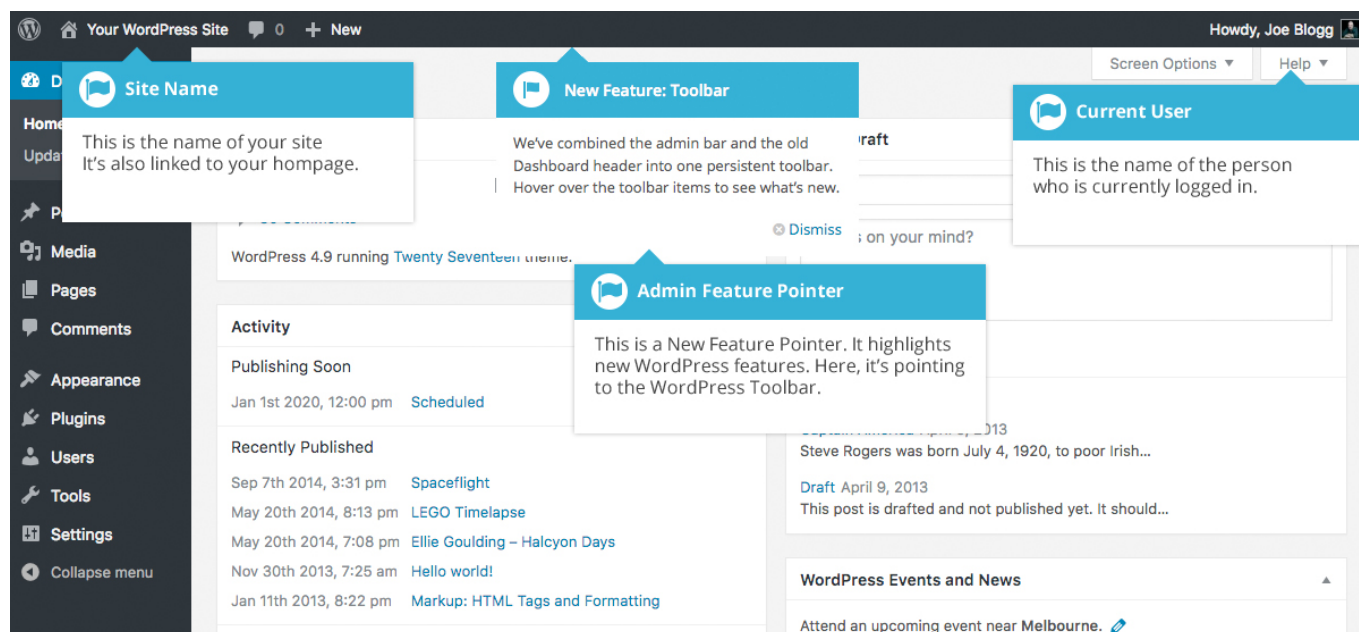

There are exceptions to this of course. For instance, your WordPress setup maybe installed in a subdirectory. For most standard setups though, you'll find the above [URL](#) should work.

You can login to your Dashboard using either your Username or your email address associated with your account.

Dashboard

Once you've logged in, the WordPress Dashboard appears. This is your main administration homepage. At the very top of your Dashboard (and across every page) you will see the name of your site in the header area. In the example screenshot below (and throughout this documentation) the site name is *Your WordPress Site*. This is also hyperlinked to your site's homepage. You will also see the name of the person who is currently logged in (e.g. Joe Blogg). Move your cursor over your name to reveal the *Log Out* link as well as a link to edit your Profile.

When new or updated features are introduced into WordPress, you'll be shown a *New Feature Pointer*. This is simply to bring to your attention some feature within the Dashboard that's been added or updated. In the following Dashboard image, the New Feature Pointer is highlighting the updated Toolbar. Click *Dismiss* to hide the pointer.

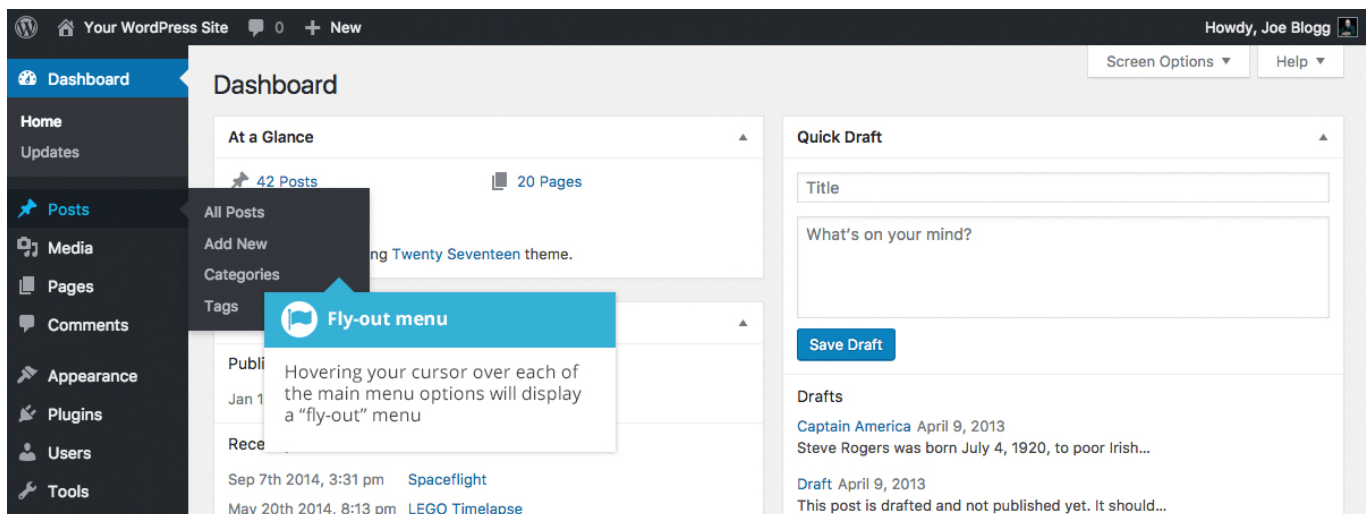

On most pages, just below your Username there are a couple of small inverted tabs. One called *Screen Options* and another called *Help*. Clicking either of these links will cause a panel to slide down from the top of the page. The *Help* link, not surprisingly, displays some help information. The *Screen Options* link will display various options that allow you to configure what is displayed on the current page.

The details in this panel change depending on what page you're currently viewing. As an example, on your main Dashboard page the Screen Options allow you to set which panels you'd like displayed on the page.

Dashboard Menu Options

Down the left-hand side of the Dashboard and on every page you will see your main navigation menu. This is where you'll find all the options to update and configure your site.

Hovering your cursor over each of the main menu options will display a 'fly-out' menu with the various choices for that particular menu option. Once you click each of the main menu options, that particular menu will expand to show all the available options within that section (if there are any).

The main menu options and their usage are:

Dashboard

This will display your main Dashboard 'homepage'. In the top left of your Dashboard you'll see some brief stats on the number of Posts, Pages and Comments. If you have the [Akismet](#) anti-spam plugin activated, you'll also see the number of [Spam Comments](#) or comments awaiting moderation.

Posts

This is where you can create a new Blog Post. You can also update your Categories and Post Tags.

Media

This is where all your uploaded images, documents or files are stored. You can browse through your Media library, as well as edit and update the files.

Pages

This is where you create and maintain all your Pages.

Comments

You can manage all your Comments within this section, including replying to comments or marking them as spam.

Appearance

This menu is where you control how your site looks. You can choose a new Theme, manage your site Widgets or Menus and even edit your site theme files.

Plugins

Plugins extend and expand the functionality of WordPress. You can add or delete plugins within here as well as activate or deactivate them.

Users

This screen lists all the existing users for your site. Depending on your Role, you can also add new users as well as manage their Roles.

Tools

This section gives you access to various convenient tools. You can also import data to your WordPress site or export all your WordPress data to a file.

Settings

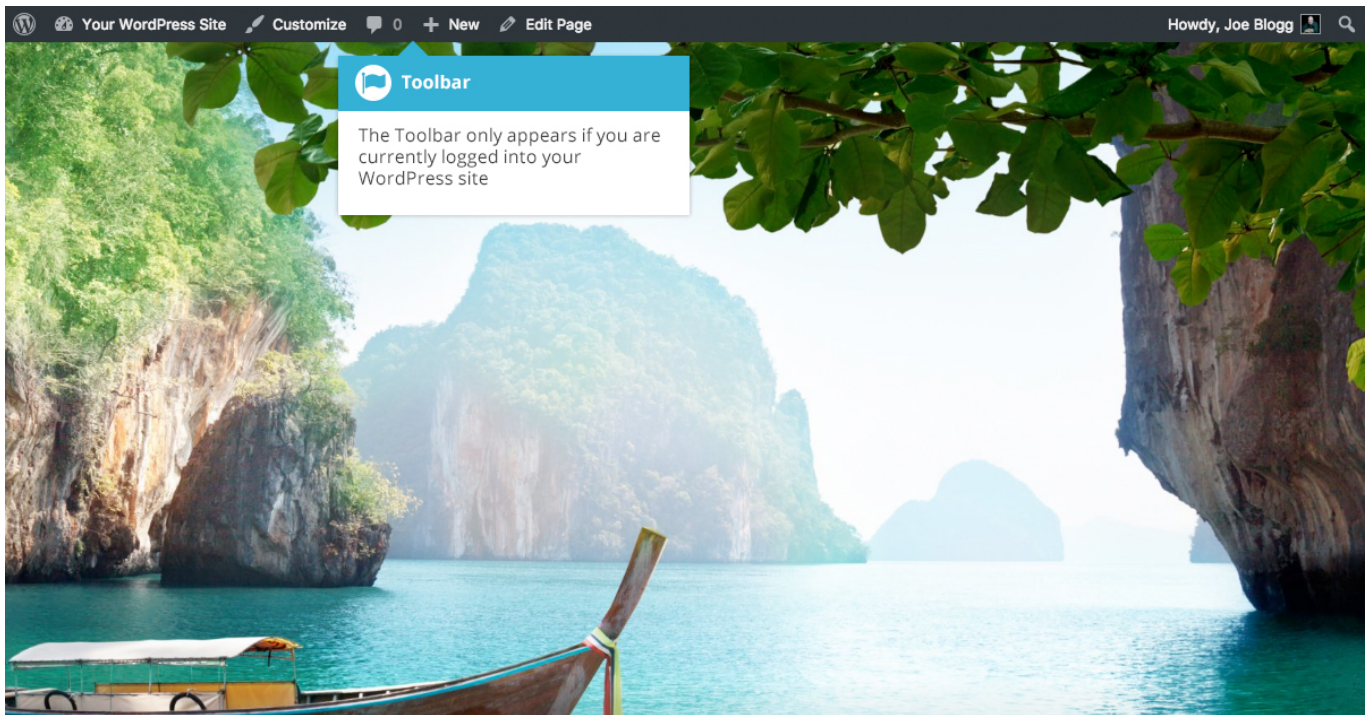

This is where most of your site is configured. Among other things, it allows you to configure your site name and URL, where your Posts appear, whether people can leave Post Comments or not and numerous other settings. Most times, once your site is setup, there's no need to change any of the settings within this section.

At the bottom of the menu you'll see a link called *Collapse menu*. Clicking this will hide the menu and simply display their icons instead. Click the small arrow icon again to expand the menu.

Occasionally when you install a plugin, they will have their own configuration or setup pages. The location of these will be entirely dependent on the individual plugin but most times these pages will either appear within the *Tools* section, the *Settings* section or in a completely new menu section at the bottom of the menu.

Toolbar

The WordPress Toolbar is a way of easily accessing some of the most common WordPress features. When you are logged into your WordPress dashboard and you visit your website, you will see the Toolbar running across the top of your site. This bar only appears if you are currently logged into your WordPress site, which means that it won't be visible to your everyday site visitors. If you are not logged in, the Toolbar won't be displayed.

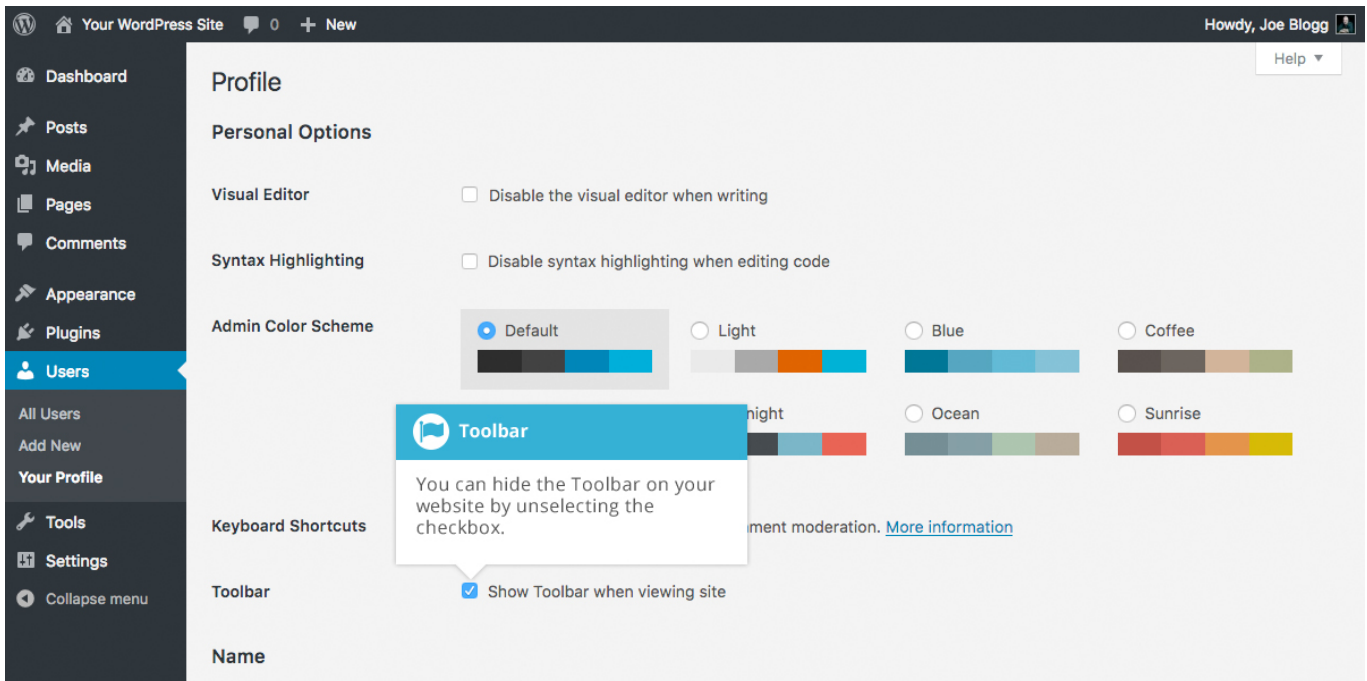

The Toolbar allows you to quickly access the following commonly used features.

- Visit the WordPress.org website, Codex or Support forums
- Display your site Dashboard and other commonly used menu options that allow you to update your site Themes, Widgets and Menus
- Visit the Customizer to update various site settings and depending on your theme, update your Background and Header images

- View or Edit your blog comments
- Add a new Post, Media, Page or User
- Perform a site Search
- View or Edit your Profile and logout from the WordPress Dashboard

Hiding the Toolbar

You can stop the Toolbar from displaying by modifying the preferences associated with your Profile. Simply click on the *Users* link in the left-hand navigation to display the list of Users. From this list of Users, click your user name or click on the *Edit* link that appears beneath the user name when hovering your cursor over each row. Alternatively, click on the *Your Profile* link underneath the *Users* menu option in the left-hand navigation or within the fly-out menu.

When editing your Profile there is a Toolbar option as shown in the screen above.

- **Show Toolbar when viewing site** – Checking this box will display the Toolbar at the very top of your website (only for the person who is currently logged in)

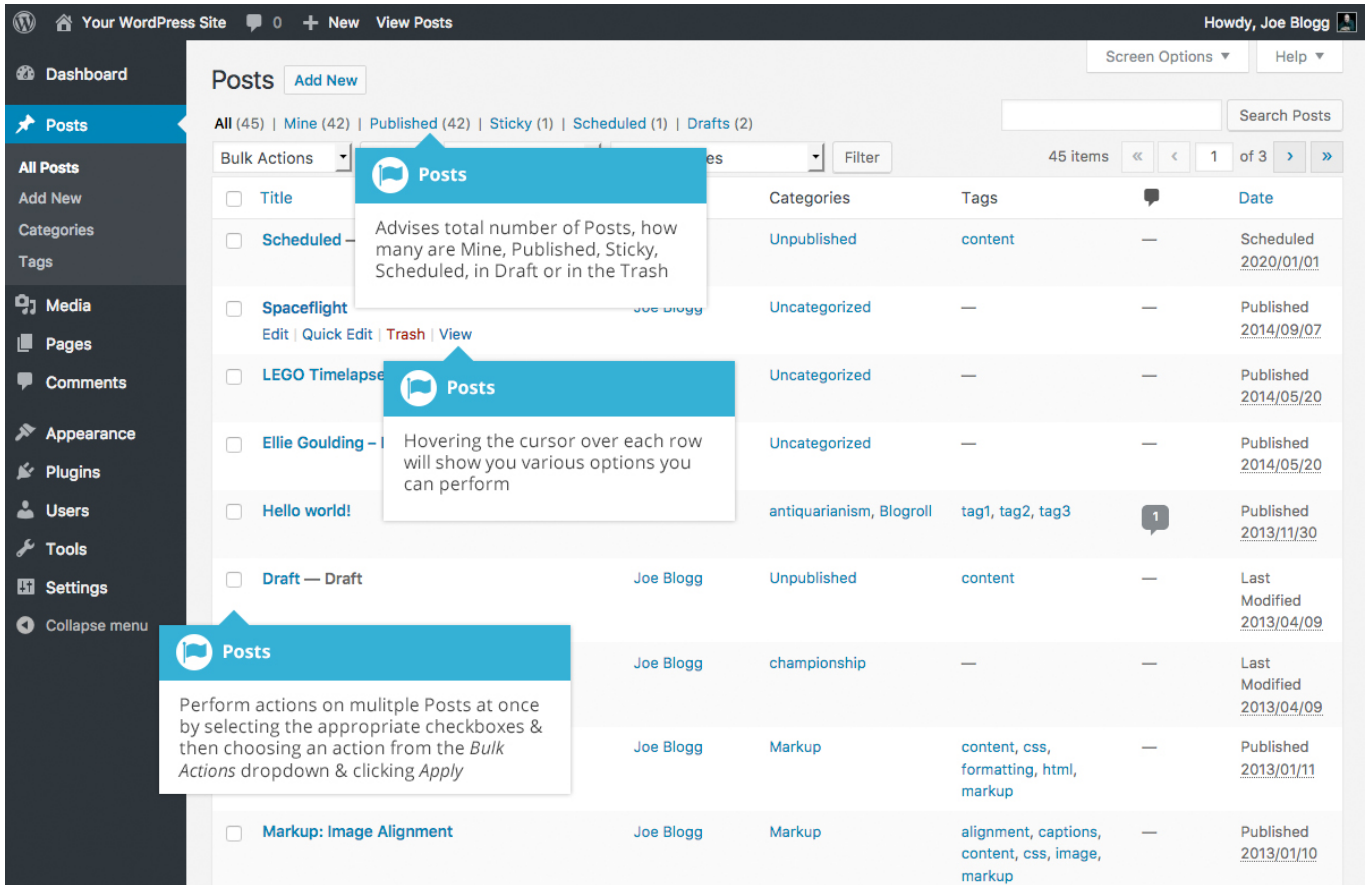

Posts versus Pages

WordPress is built around two basic concepts. Posts and Pages. Posts are typically blog entries. A series of articles, listed (usually) reverse-chronologically. Pages are used for more static content (i.e. content that doesn't change or changes infrequently). An 'About us' page is an example of a Page on a typical website. In most cases you'll find that the content in the 'About us' page doesn't change all that frequently.

Now, you might be thinking, "but I don't need a blog". This might be true, but you can also use the blog concept if you have a site where you need to display your 'latest news' or even just company updates. Basically, any information that gets updated on a semi-regular basis can benefit from the 'blog' functionality. Whether that's a traditional blog, your company's 'latest news' or even just your own personal updates.

Posts

After clicking on the *Posts* menu option you'll be shown a list of Posts that your site contains. Among the information displayed is the Post title, the Author, Categories, Tags, No. of Comments and either the Date Published, Date Scheduled or the Date the Post was Last Modified. The Posts screen will look similar to the screen below.

At the top of the page you can view how many Posts in total you have in your site, how many have been published by yourself or Published, Scheduled, Sticky, Pending, in Draft or in the Trash.

When hovering your cursor over each row, a few links will appear beneath the Post title.

- **Edit** – Will allow you to edit your Post. This is the same as clicking on the Post title
- **Quick Edit** – Allows you to edit basic Post information such as Title, Slug, Date plus a few other options
- **Trash** – Will send the Post to the Trash. Once the Trash is emptied, the page is deleted
- **View** – Displays the Post. If the Post hasn't been published yet, this will say *Preview*

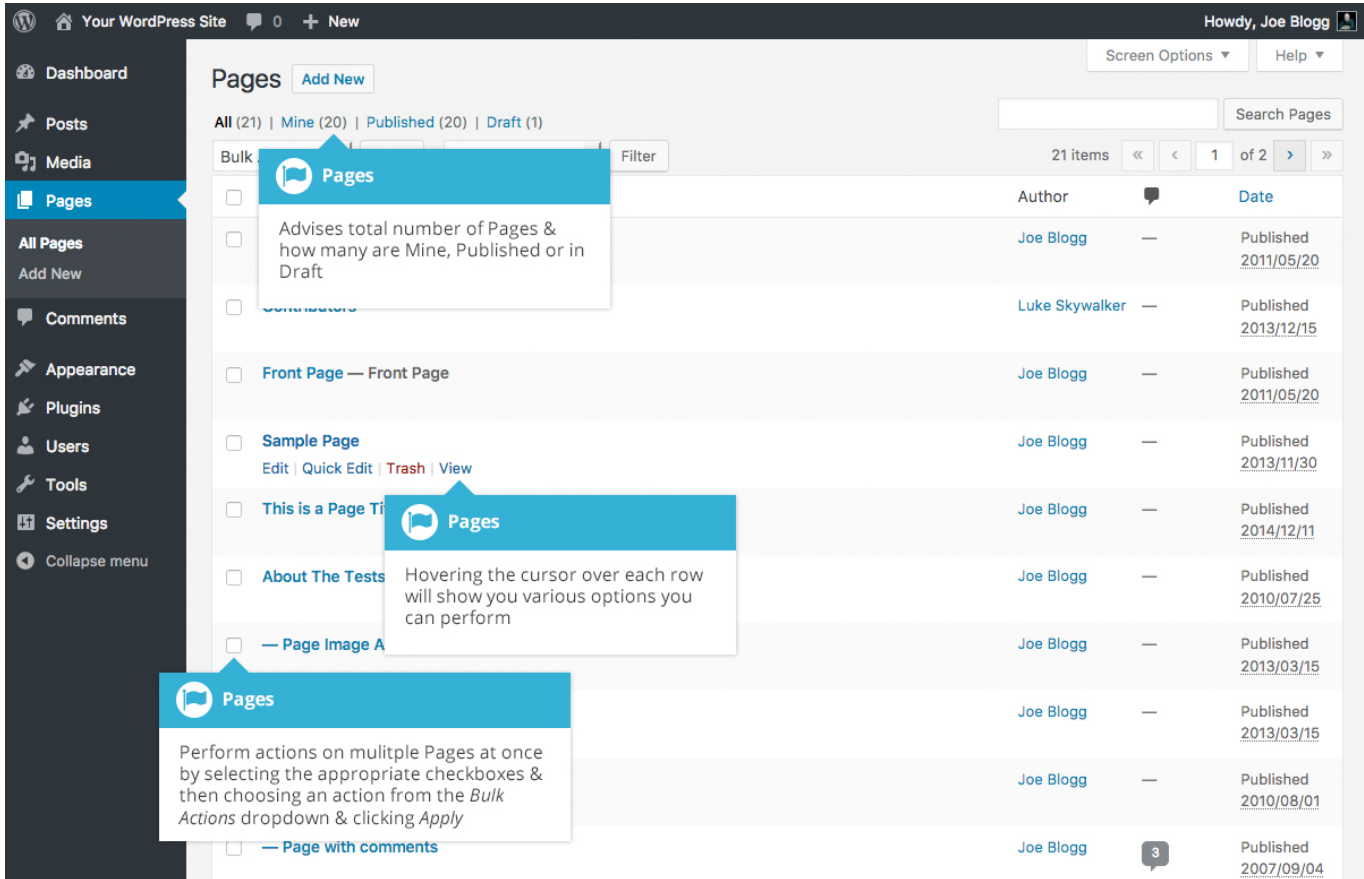

Next to each Post title is a checkbox. This allows you to perform an action on multiple items at once. You simply check the Posts that you would like to affect and then from the Bulk Actions dropdown select either the *Edit* option or the *Move to Trash* option and then click the *Apply* button. The *Edit* option will allow you to edit the Categories, Tags, Author, whether to allow Comments and Pings or not, the Status and whether or not the Posts are 'Sticky'. The *Move to Trash* option will move the selected items to the Trash.

You can also filter the pages that are displayed using the dropdown lists and the *Filter* button.

Clicking the *Screen Options* button at the top-right of the screen allows you to change how the Posts list is displayed. Click the *List View* option to display the posts in the traditional List View or click the *Excerpt View* option to display a short excerpt from the Post underneath the Post title. You can also hide various columns from view if you don't want to see them. Clicking the *Apply* button will save your changes.

Pages

After clicking on the *Pages* menu option you'll be shown a list of Pages that your site contains. Among the information displayed is the Page title, the Author, No. of Comments and either the Date Published or the Date the Page was Last Modified. The Pages screen will look similar to screen below.

At the top of the page you can view how many Pages in total you have in your site, how many have been published by yourself or how many are Published or in Draft.

When hovering your cursor over each row, a few links will appear beneath the Page title.

- **Edit** – Will allow you to edit your Page. This is the same as clicking on the Page title
- **Quick Edit** – Allows you to edit basic Page information such as Title, Slug, Date plus a few other options
- **Trash** – Will send the Page to the Trash. Once the Trash is emptied, the page is deleted
- **View** – Displays the Page. If the Page hasn't been published yet, this will say *Preview*

Next to each Page title is a checkbox. This allows you to perform an action on multiple items at once. You simply check the Pages that you would like to affect and then from the Bulk Actions dropdown select either the *Edit* option or the *Move to Trash* option and then click the *Apply* button. The *Edit* option will allow you to edit the Author, Parent, Template, whether to allow Comments or not and the Status of each of the checked items. The *Move to Trash* option will move the selected items to the Trash.

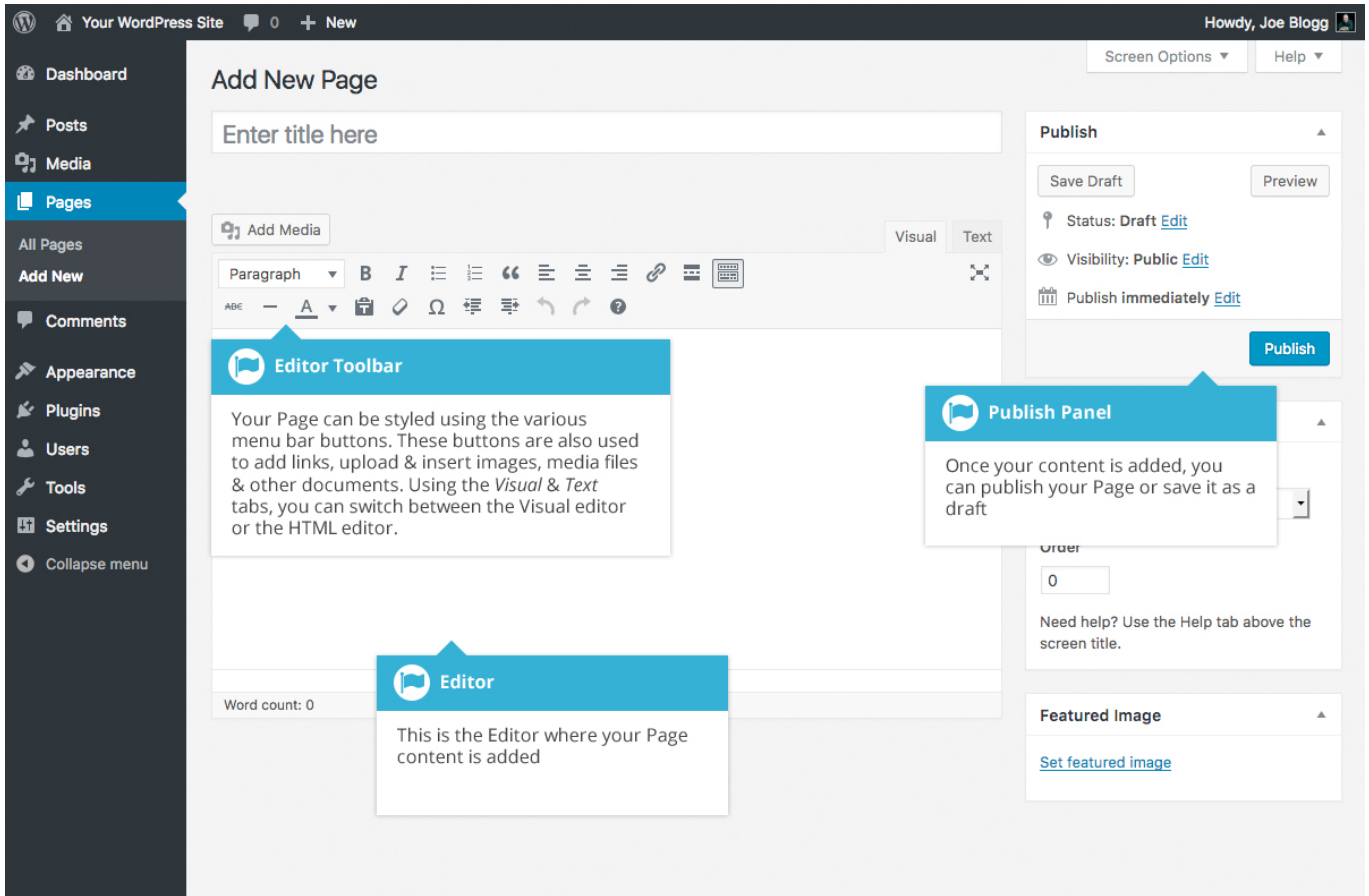

You can also filter the pages that are displayed using the dropdown list and the *Filter* button.

Adding your Site Content

Adding content to your site is an easy process no matter whether you're creating a Post or a Page. The procedure for both is almost identical. Apart from how they display on your site, which was described earlier, the other main difference is that Posts allow you to associate [Categories](#) and [Tags](#) whereas Pages don't. What's the difference between categories and tags? Normally, Tags are ad-hoc keywords that identify important information in your Post (names, subjects, etc) that may or may not recur in other Posts, while Categories are pre-determined sections. If you think of your site like a book, the Categories are like the Table of Contents and the Tags are like the terms in the index.

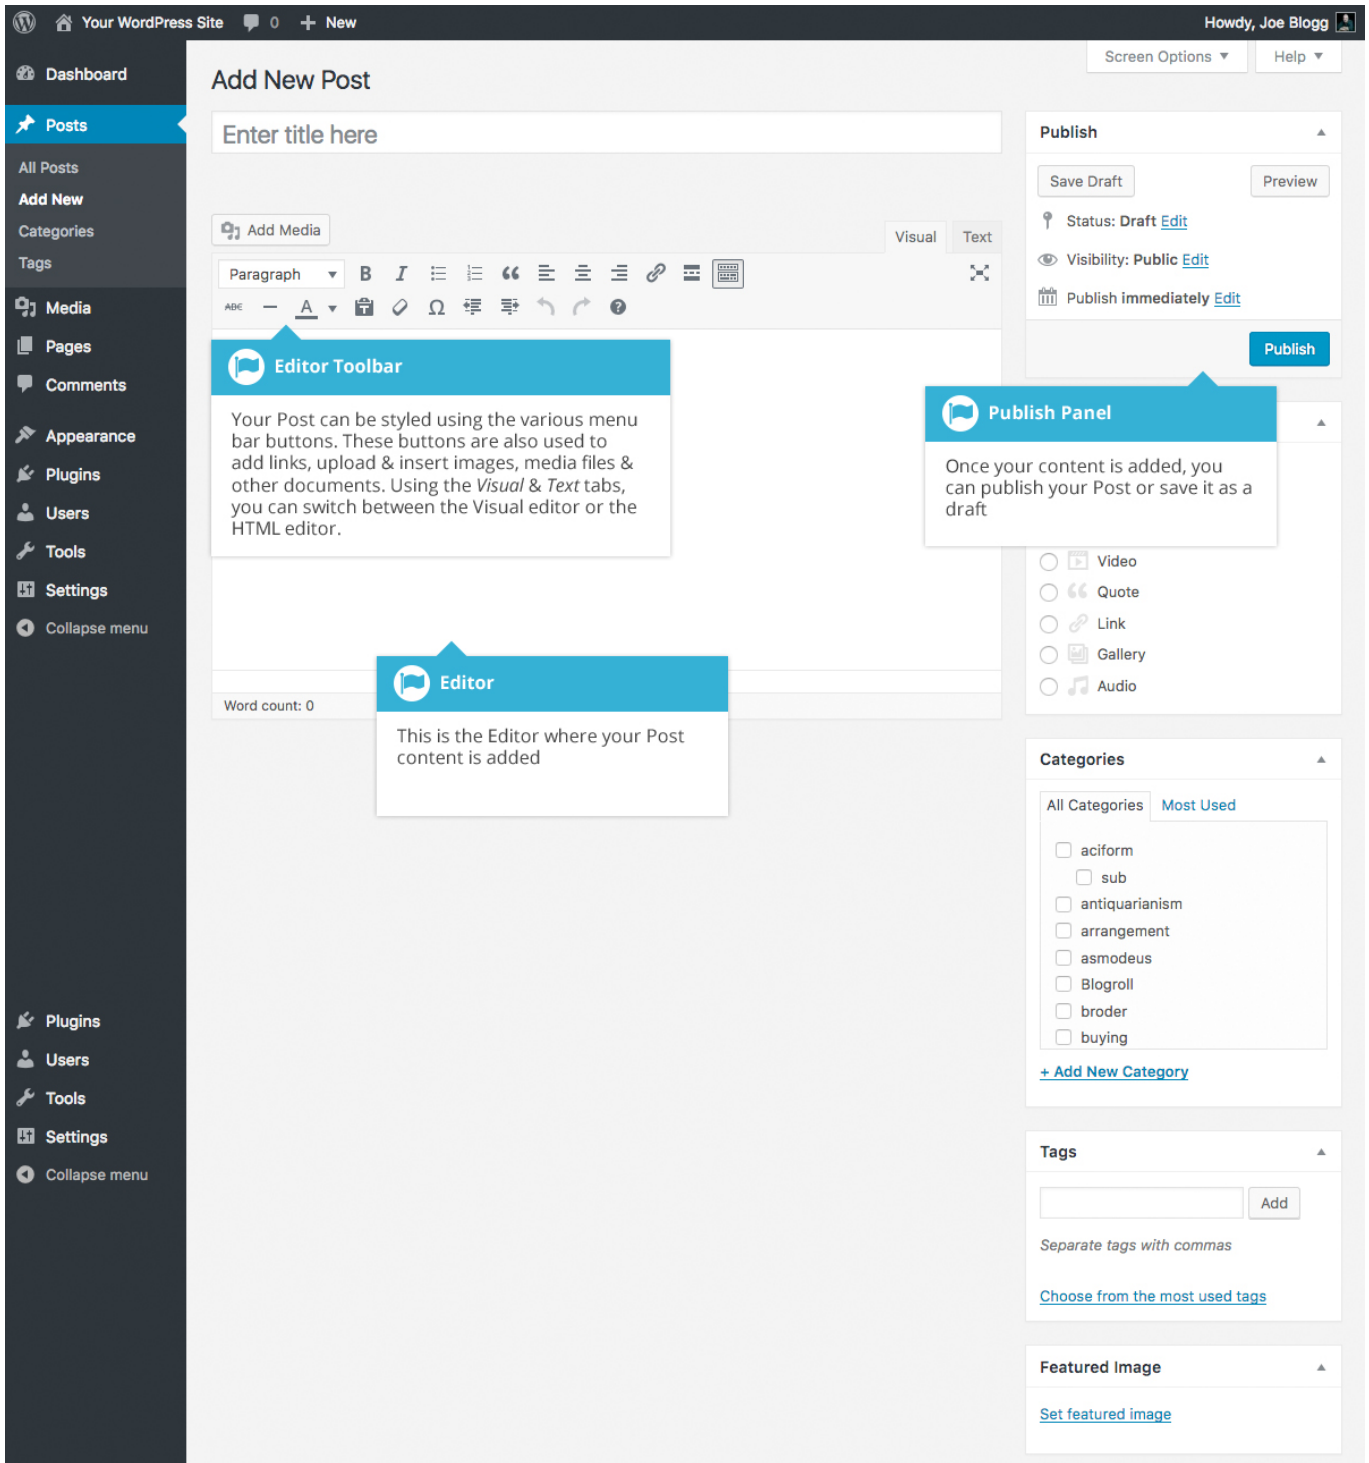

Adding a New Page

To add a new Page, hover your cursor over the *Pages* menu option in the left-hand navigation menu and in the fly-out menu, click the *Add New* link. Alternatively, click the *Pages* menu option and then click the *Add New* link underneath, or the *Add New* button at the top of the page. You will be presented with a page similar to the image below.

Adding a New Post

To add a new Post, hover over the *Posts* menu option in the left-hand navigation menu and in the fly-out menu, click the *Add New* link. Alternatively, click the *Posts* menu option and then click the *Add New* link underneath, or the *Add New* button at the top of the page. You will be presented with a page similar to the image below.

Adding Content with the Visual Editor

The editor used to enter content into your Page or Post is very easy to use. It's much like using a regular word processor, with toolbar buttons that allow you to

Bold (**B**) or *Italicize* (*I*) text or enter in Headings (Paragraph ▼) or bullet points (☰ ☷). You can even use most of the basic keyboard shortcuts used in other text editors. For example: *Shift+Enter* inserts a line break, *Ctrl+C/Cmd+C* = copy, *Ctrl+X/Cmd+X* = cut, *Ctrl+Z/Cmd+Z* = undo, *Ctrl+Y/Cmd+Y* = redo, *Ctrl+A/Cmd+A* = select all, etc. (use the *Ctrl* key on a PC or the *Command* key on a Mac).

When adding content to your page, the Visual Editor expands to fit your content, rather than simply scrolling. On top of that, no matter how tall the Visual Editor becomes, the toolbar buttons will be available at all times by sticking to the top of the page.

By making use of special keyboard shortcuts, adding content is now even easier. When you want to add different size headings to your content, rather than having to select the heading size from the toolbar dropdown you can now start a line with two or more hashtags (#) and once you hit *Enter* to go to the next line, the Visual Editor will automatically convert your text to the appropriate heading. Like headings, you can also use * or - to create an unordered list, using **1.** will start an ordered list, and > will create a blockquote.

The complete list of keyboard shortcuts available are as follows;

- * – Start an unordered list
- - – Start an unordered list
- 1. – Start an ordered list
- 1) – Start an unordered list
- ## – H2
- ### – H3
- #### – H4
- ##### – H5
- ##### – H6
- > – Add a blockquote
- --- – Add a horizontal line

- `` ` – Convert text into code block (replace .. with your text)

At the top of the editor there are two tabs, *Visual* and *Text* (). These switch the editor view between the *Visual Editor* and the *Text editor*. The Text view will enable you to view the HTML code that makes up your content. For the more experienced users this can be helpful at times but for those not familiar with HTML tags, it's not recommended.

When creating a new Page or Post, the first thing to do is enter in your title in the top entry field where it says *Enter title here*. After moving the cursor down to the editor a new [Permalink](#) is created for your page. Permalinks are the permanent URL's to your individual Posts, Pages, Categories etc.. Though not usually necessary, you can manually edit your permalink by clicking on the actual permalink (the part after the domain name with the yellow background) or by clicking the *Edit* button next to it. Once you've modified it, click *Ok* to save or *Cancel* to cancel your changes.

At the top of the editor where your content is written, there are numerous formatting buttons. Clicking the *Toolbar Toggle* button () will show or hide a second line of formatting buttons which gives you extra functionality. The editor buttons perform the following functions:

Add Media – Used to upload and insert media such as images, audio, video or documents

Paragraph ▼

Style – Used to format the Page text based on the styles used by the current Theme

Bold – Bold text

Italic – Italicise text

Bulleted List – Create an unordered (bullet point) list

Numbered List – Create an Ordered (numbered) list

Blockquote – Used as a way of showing a quote. How this looks will be entirely dependent on the Theme that your site is currently using

Align Left – Align text to the left

Align Center – Align text in the center of the page

Align Right – Align text to the right

Insert/edit link – Used to create an html link to another page or website. If no text is selected first, the URL that you enter will also be used for the link text

Insert Read More tag – Inserts the More tag into your Page. Most blogs only display a small excerpt of a Post and you're required to click the Post title or a 'Read more...' link to continue reading the rest of the article. When you insert a 'More' tag into your Post, everything prior to the tag is considered as this excerpt. Most times you'd only use this button when you're creating a blog Post, rather than a Page

Toolbar Toggle – Used to show or hide the second row of formatting buttons on the editor toolbar

Distraction Free Writing – Clicking this button will enlarge the editor so that it fills the browser window. Clicking the *Exit fullscreen* link at the top of the screen will reduce it back to its original size

Strikethrough – Add a strikethrough to your text

Horizontal Line – Inserts a horizontal line into your page

Text color – Use to change the color of text

Paste as text – Copying and pasting text from other sites or word processors sometimes leaves the text formatted differently to what you were expecting. The reason for this is that quite often the html tags or codes that formatted the original text are pasted along with the text itself. To avoid this, Paste as Text will strip all these formatting and html tags. The Paste as Text option acts like a toggle, staying on until you turn it off by clicking the button again or until you save your page content

Clear formatting – Use this to remove all the formatting (e.g. Bold, Underline, text color etc..) from the highlighted text

Special character – Used to insert special characters not easily accessible via the keyboard (e.g. ¼, ½, ¾, ©, €, ö etc..)

Decrease indent – Removes one level of indenting

Increase indent – Indents text by one level

Undo – Undo your last action

Redo – Redo your last action

Keyboard shortcuts – Displays information about the WordPress Visual Editor along with keyboard shortcuts

Visual

Text

Visual/Text – Switches the editor view between the Visual Editor and the Text editor. The Text view will enable you to view the HTML code that makes up your content. For the more experienced users this can be helpful at times but for those not familiar with HTML tags, it's not recommended

Switching to the Text Editor

At the top of the editor there are two tabs, *Visual* and *Text* (). These switch the editor view between the Visual Editor and the Text editor. The Text view will enable you to view the HTML code that makes up your content. For the more experienced users this can be helpful at times but for those not familiar with HTML tags, it's not recommended.

The Text editor is much like the Visual Editor, only not as intuitive. The numerous formatting buttons provide you with basic HTML formatting capabilities when editing your Page or Post content.

The buttons work in two ways. Clicking a button without highlighting any text first, will simply insert the opening HTML tag relevant for that button. As an example, clicking the *Bold* button will insert the `` HTML tag into your text. Clicking the *Bold* button again will close the tag by inserting the closing `` tag. If you highlight some text prior to clicking a button, both the opening and closing tags will be inserted around that highlighted text. For example, highlighting the text, 'bold text', prior to clicking the *Bold* button will insert '`bold text`'.

The following editor buttons are available whilst in the Text editor:

Bold – Bold text

Italic – Italicise text

Link – Used to insert a website link. When the button is clicked a pop-up window will appear where you type in the URL that you would like to link to

Blockquote – Used as a way of showing a quote. How this looks will be entirely dependent on the Theme that your site is currently using

Delete – Used as a way of showing deleted text. How this looks will be dependent on the Theme but is usually done by showing the text with a strikethrough

Insert – Used as a way of showing inserted text. How this looks will be dependent on the Theme but is usually done by showing the text with an underline

Image – Used to insert an image into the text. When the button is clicked a pop-up window will appear where you type in the URL of the image that you would like inserted

Unordered List – Used to insert an unordered (bullet point) list

Ordered List – Used to insert an ordered (numbered) list

List Item – Used to insert a list item into your ordered or unordered list

Code –Used for indicating a piece of code

More – Inserts the More tag into your Page. Most blogs only display a small excerpt of a Post and you're required to click the Post title or a 'Read more...' link to continue reading the rest of the article. When you insert a 'More' tag into your Post, everything prior to the tag is considered as this excerpt. Most times you'd only use this button when you're creating a blog Post, rather than a Page

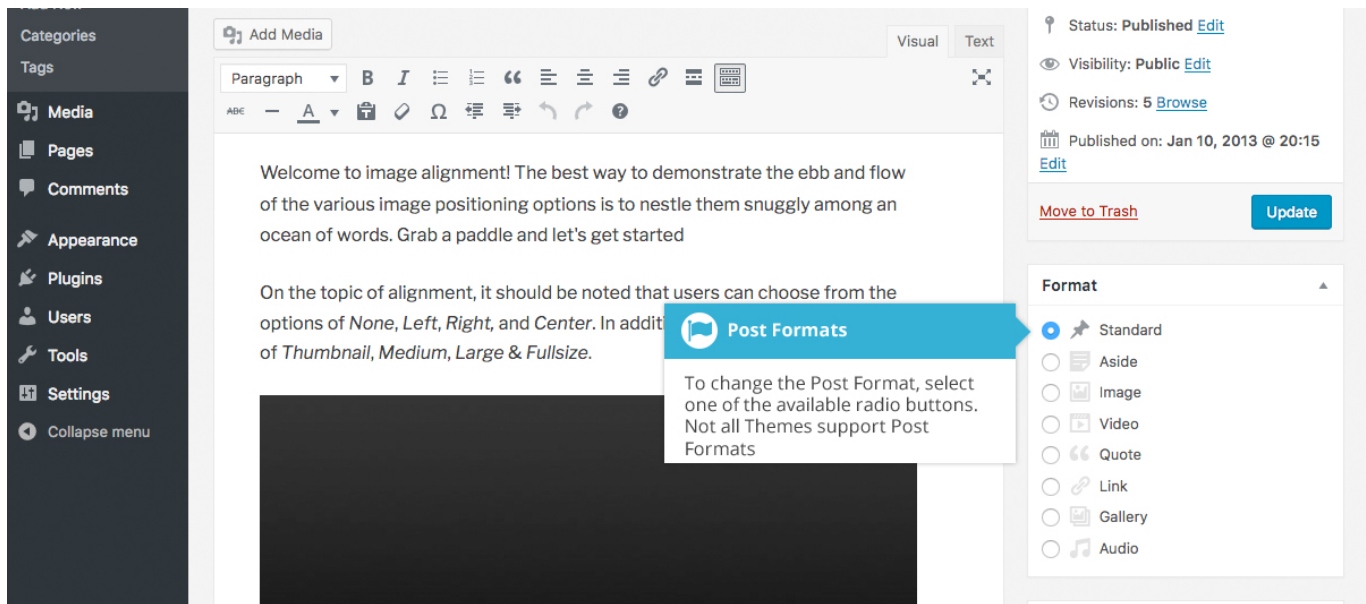

Close Tags – Used to close open tags. If for example, you clicked both the Bold and Italic buttons to insert their opening tags, clicking the Close tags button will insert both of the matching closing tags, in the correct order

Distraction Free Writing – Clicking this button will enlarge the editor so that it fills the browser window. Clicking the *Exit fullscreen* link at the top of the screen will reduce it back to its original size

Changing your Post Format

A Post Format is meta information that can be used within a Theme to style or customise the presentation of a Post. The Post Formats feature provides a standardised list of formats that are available to all themes that support the feature. There is no requirement for Themes to support every format on the list and new formats cannot be introduced by themes or even plugins. If your Theme supports Post Formats you can choose how each Post looks by selecting a *Post Format* from a list of radio buttons, similar to the following screen. If your Theme doesn't support Post Formats then the *Format* panel won't be displayed.

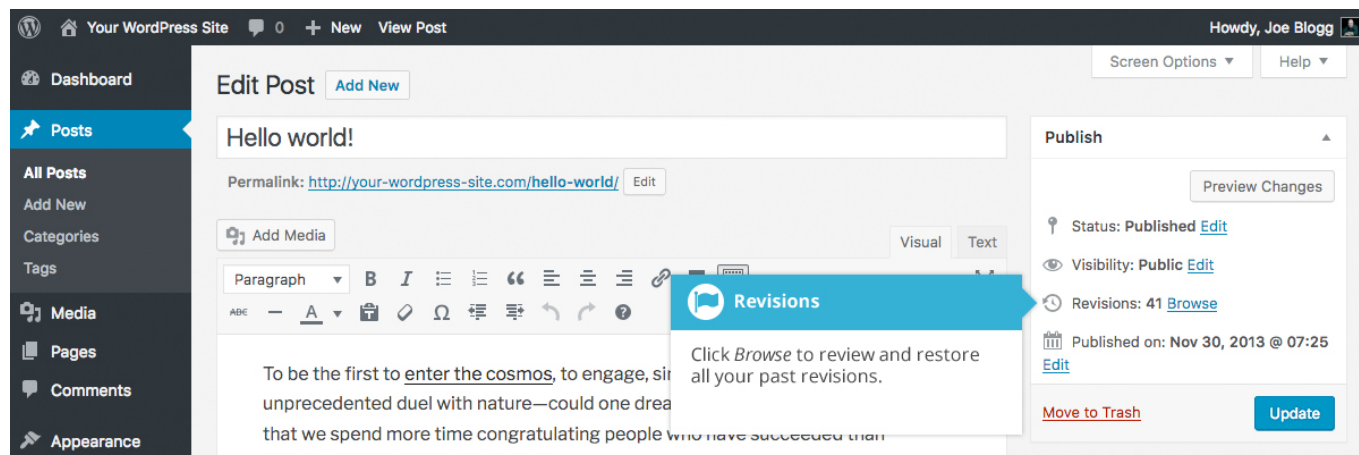

While the actual post content entry won't change, the theme can use the selected Format to display the post differently. How content is displayed is entirely up to the Theme, but the following list of available Post Formats provides some general WordPress guidelines as to how they might be styled.

- **Standard** – This is the standard/default blog post format.
- **Aside** – Typically styled without a title. Similar to a Facebook note update
- **Audio** – An audio file, such as a Podcast
- **Chat** – A chat transcript
- **Gallery** – A gallery of images. Post will likely contain a gallery [shortcode](#) and will have image attachments
- **Image** – A single image
- **Link** – A link to another site
- **Quote** – A quotation, most likely contained within a blockquote
- **Status** – A short status update, similar to a Twitter status update
- **Video** – A single video

Reviewing Past Revisions

When you're editing your Post or Page, the number of revisions for that particular Post or Page is shown in the *Publish* Panel, if you have any.

Click the *Browse* link next to *Revisions*: in the *Publish* panel to browse through the various revisions for the current Post or Page.

Use the slider at the top of the page or click the *Previous* and *Next* buttons to navigate through your various Post or Page revisions.

Content that has been deleted will be shaded red and content that has been added will be shaded green. If there is content that is shaded dark red and/or dark green, it's highlighting specific content that was removed or added. If the paragraph or line is simply light red and/or light green, then the whole paragraph or line was affected by the change.

You can also compare two different revisions by clicking the *Compare any two revisions* checkbox at the top of the page.

If you'd like to restore a previous revision, click the *Restore This Revision* button.

Spaceflights cannot be stopped. This is not the

Adding Images and Other Media

Adding images and other media files such as videos, documents or PDFs is extremely easy within WordPress. All your images and files are stored in the Media Library. Once they're uploaded into the Media Library, it's a very simple matter to insert them into your Page or Post content. In the case of files such as Word Documents or PDFs, if necessary, it's a simple process to create links to those files so that people can then download them.

Inserting an Image

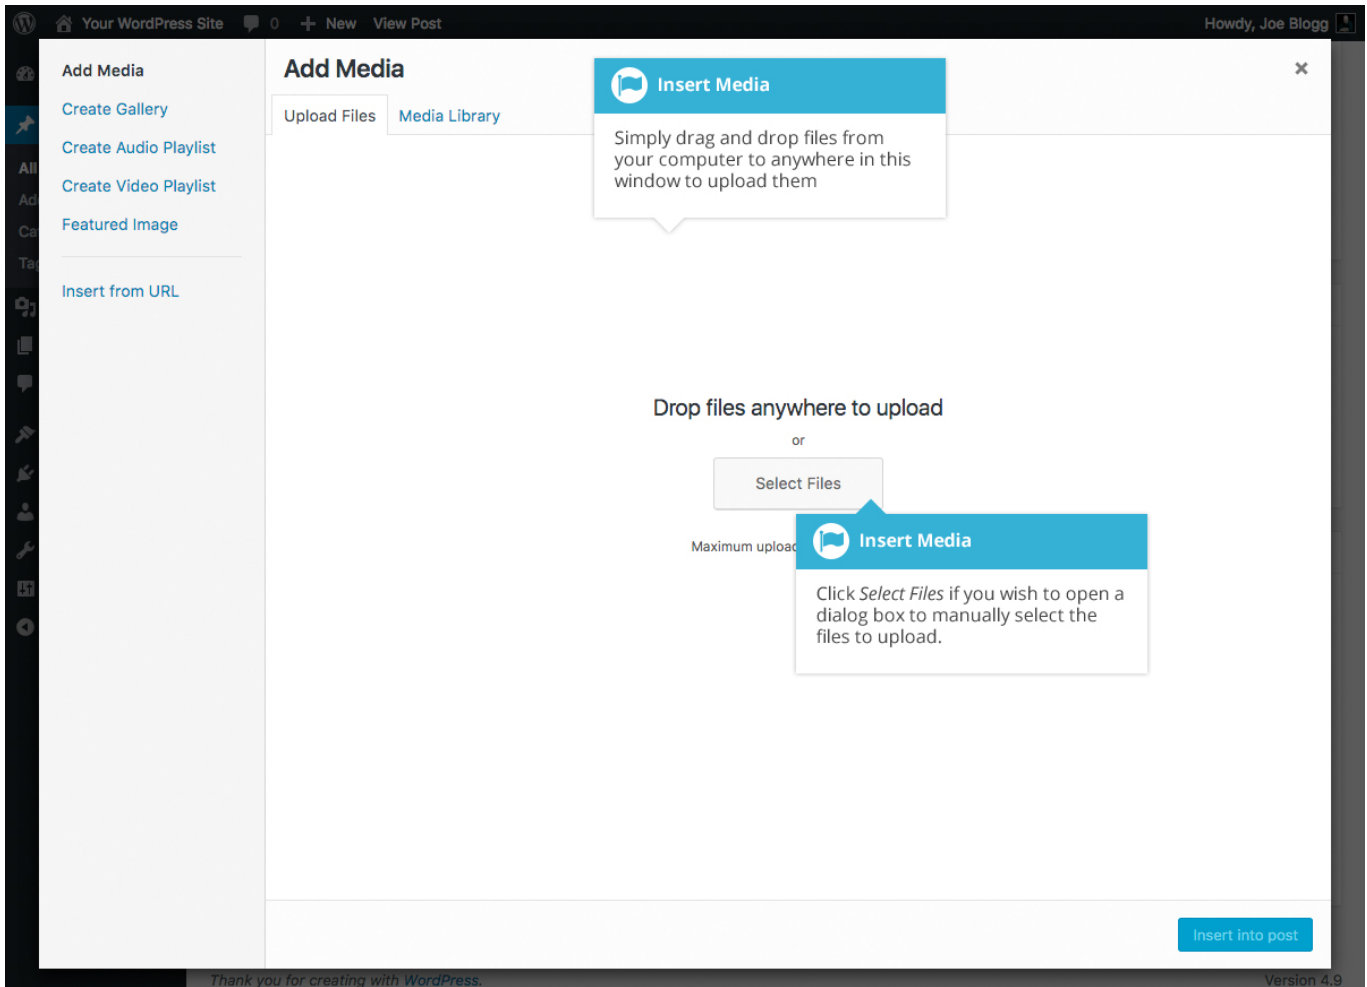

Using the WordPress media manager, it's extremely simple to insert, align and link your individual images and image galleries.

To insert an image into your Page/Post, click the *Add Media* button

() and then simply drag your image(s) from wherever they are on your computer, into the browser window. Your file(s) will be automatically uploaded.

Alternatively, click the *Select Files* button and then select the file(s) that you'd like to upload, using the dialog window that is displayed.

It's also possible to simply drag your image straight into the Visual Editor, rather than clicking the *Add Media* button.

No matter whether you've clicked the *Add Media* button or simply dragged and dropped your image into the Visual Editor, once your image is uploaded, your Media Library is displayed, which contains all your previously uploaded images. The image(s) that you've just uploaded will be automatically 'selected' for easy insertion into your Page or Post. Selected images are shown with a 'tick' icon in the top right corner of the image.

After uploading your image(s), you can then select other previously uploaded images by holding down the Ctrl key (Cmd key on Macs) and simply clicking on them. To deselect an image, click the 'tick' in the top right corner of the image.

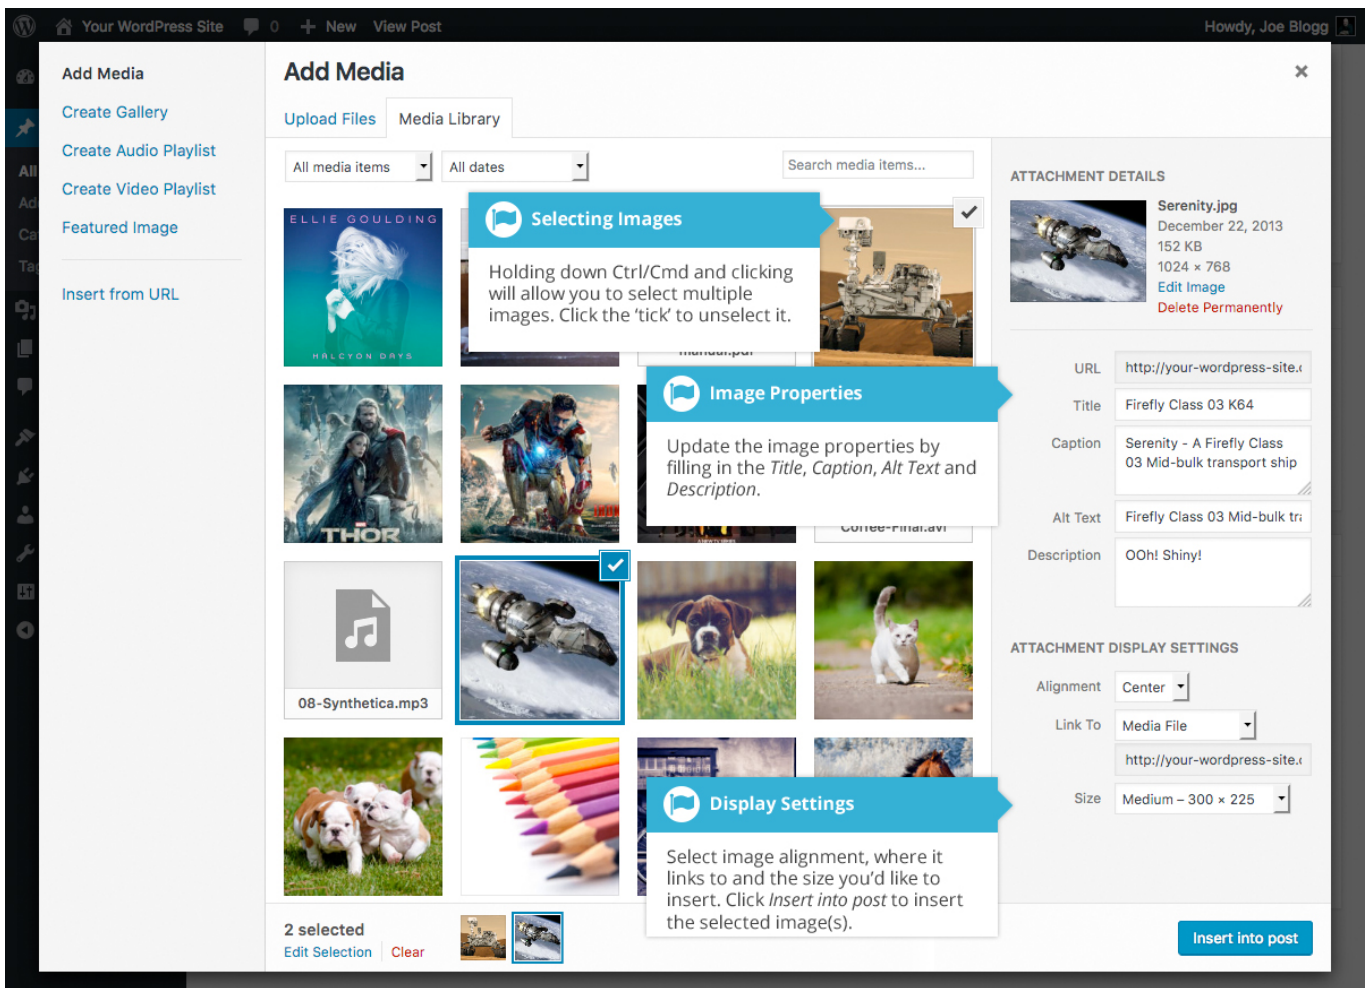

At the bottom of the window you will see a count of the number of images currently selected.

There are several options within this *Insert Media* window to help make it easier to add images into your Page or Post.

By default, all previously uploaded images are shown, starting with the most recent uploads. If you'd like to narrow this list down, at the top of the window is a dropdown list that allows you to filter your displayed images by *All media items*, items *Uploaded to this post/page*, or *Images*, *Audio* files, *Video* files or *Unattached* files. You can also filter your media files by selecting a date, or alternatively, there is also a *Search* field that allows you to search for specific images.

The properties of the currently highlighted image (i.e. The image with the blue border) will be shown on the right-hand side of the *Insert Media* window. These properties include the filename, the date the file was uploaded and the image size. It's at this point you can also change the image Title, Caption, [Alt Text](#) and Description for each image, as well as the Alignment, Link and the Size at which the image is inserted.

- **Title** – is displayed as a tooltip when the mouse cursor hovers over the image in the browser
- **Caption** – is displayed underneath the image as a short description. How this displays will be dependent on the WordPress theme in use at the time. You can also include basic HTML in your captions
- **Alt Text** – is displayed when the browser can't render the image. It's also used by screen readers for visually impaired users so it's important to fill out this field with a description of the image. To a small degree, it also plays a part in your website Search Engine Optimisation (SEO). Since search engines can't 'read' images they rely on the Alt Text
- **Description** – is usually displayed on the attachment page for the media, however this is entirely up to the theme that is currently in use

For each image, you can select how you would like the image aligned, either *Left*, *Center* or *Right* aligned, using the *Alignment* dropdown list. You can also select *None* for no alignment which will mean the image will display using the default alignment setting for your Theme.

You can also change what your inserted image(s) will link to using the *Link To* dropdown list. You have the choice of linking to the image's attachment page by selecting *Attachment Page*, or you can link to the full size image by selecting *Media File*. You can also link to any URL by selecting *Custom URL*. When you do this, a new field will appear that allows you to enter in the custom URL. You can also choose not to link to anything by selecting *None*.

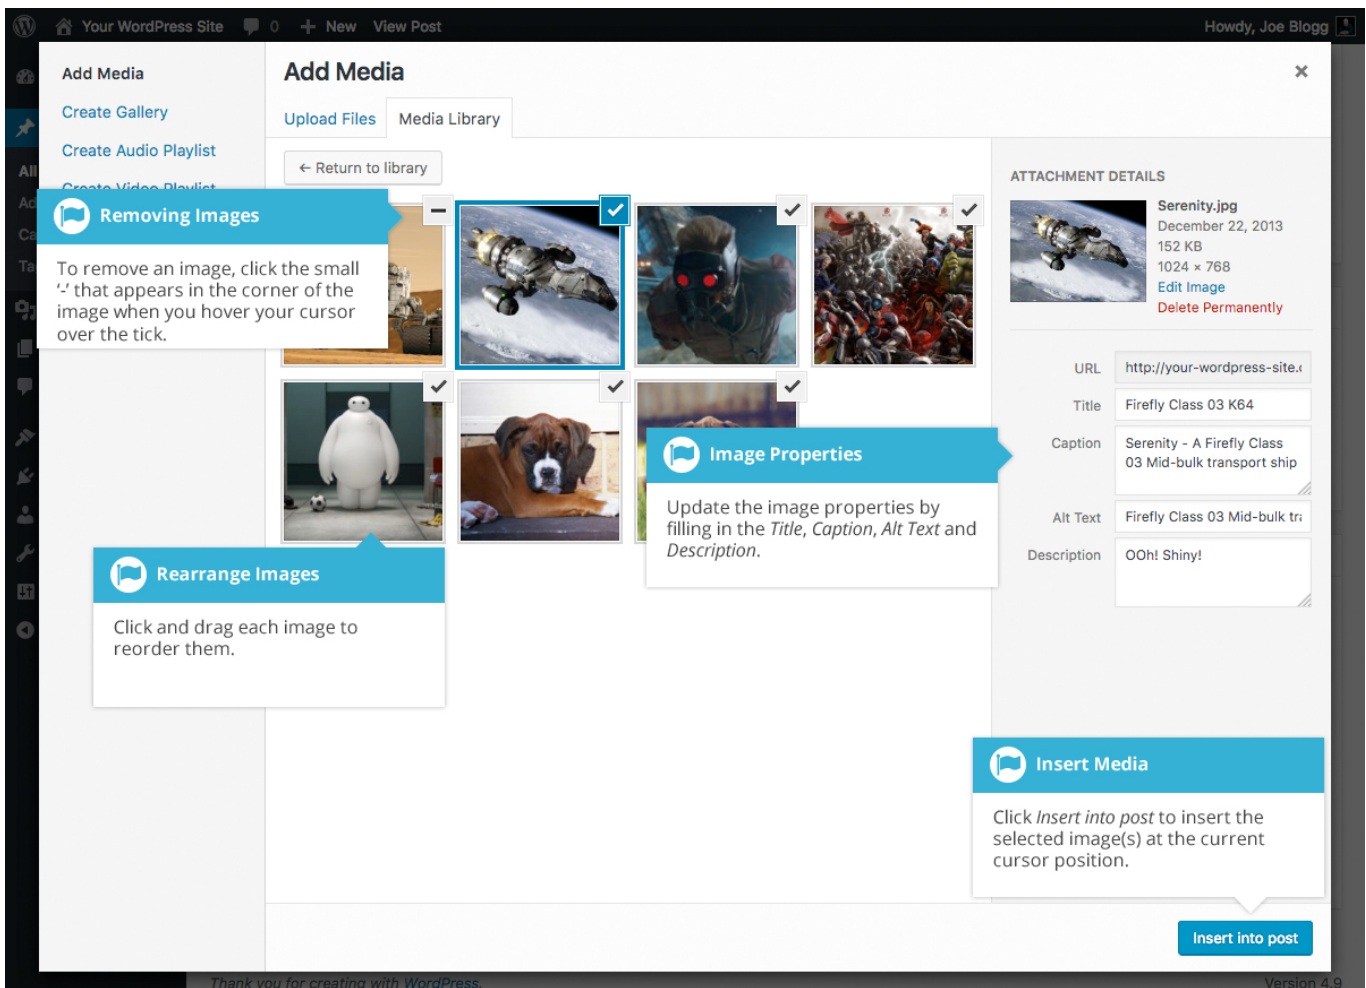

When your image(s) are uploaded, WordPress will also create several copies of your file at various sizes. You can choose which one you'd like to insert into your Page or Post using the *Size* dropdown list. To insert the image at the exact size you

uploaded, simply select *Full Size*. Next to each size listed in this dropdown will be the actual dimensions of the image, in pixels (e.g. 300 x 225).

Once you've selected all your images, click the *Insert into post* button to insert the selected image(s) into your Post at the current cursor position (when editing a Page, this button will say *Insert into page*).

If you'd like to change the order of your images, click the *Edit Selection* link at the bottom of the *Insert Media* window. The window will change so that only the selected images are shown. Alternatively, clicking the *Clear* link will deselect all images.

After clicking the *Edit Selection* link at the bottom of the *Insert Media* window, all the currently selected images are shown. You can change the order in which the images will appear in your Page or Post by clicking and dragging each image to reorder them. You can also update the image Title, Caption, [Alt Text](#) and Description for each image. To remove one of your selected images, click the small '-' that appears in the top right corner of the image when you hover your cursor over the tick.

Clicking the *Return to library* button will take you back to the previous screen that allows you to select or deselect your images.

When you're editing your Post/Page, if you wish to insert an image that you uploaded earlier (as opposed to uploading a new image), click the *Add Media* button again ( **Add Media**). Once the pop-up window displays, click the *Media Library* tab at the top of the pop-up window rather than dragging a new file into the upload window. All your previously uploaded images will be displayed, with the most recent ones shown first.

Select the image(s) that you'd like to insert into your Page or Post and then simply click the *Insert into post* button (or if you're editing a Page, this button will say *Insert into page*). As mentioned earlier, you can also click the *Edit Selection* link at the bottom of the window if you'd like to change the order the images are inserted.

Edit or Delete an Image

There are various options available for adjusting the layout of inserted images.

After clicking on an image that has already been inserted into your Page or Post, a small toolbar will appear over the image. By selecting one of the alignment

buttons (   ) you can change the alignment of the inserted image.

Clicking the *Edit* button () allows you to edit the image properties. Clicking the

Remove button () will remove the image from your content. It will only remove the image from your Page or Post, it will not delete the image from your Media Library.

When you click on an image in your Page or Post, as well as the alignment, edit and delete icons mentioned above, the image also displays ‘resizing handles’. These are the small squares you see around the edge of the image. To resize your image, simply click and drag one of the corner resize handles.

As with any image editing software though, if you try to enlarge a small image, it will tend to get quite pixelated. It’s always best to insert a large image and then resize down.

The screenshot shows the WordPress 'Edit Post' interface. The main content area contains a paragraph of text and an image of the Starship Enterprise. Two callout boxes provide instructions on how to align, edit, or delete the image. The right sidebar contains 'Publish', 'Format', and 'Categories' sections.

Align, Edit or Delete Image
Click one of the Alignment icons to change the alignment of the inserted image. Click the *Edit* icon to update the image properties. Click the *Delete* icon to delete the image from your Page or Post. It will not delete the image from your Media Library.

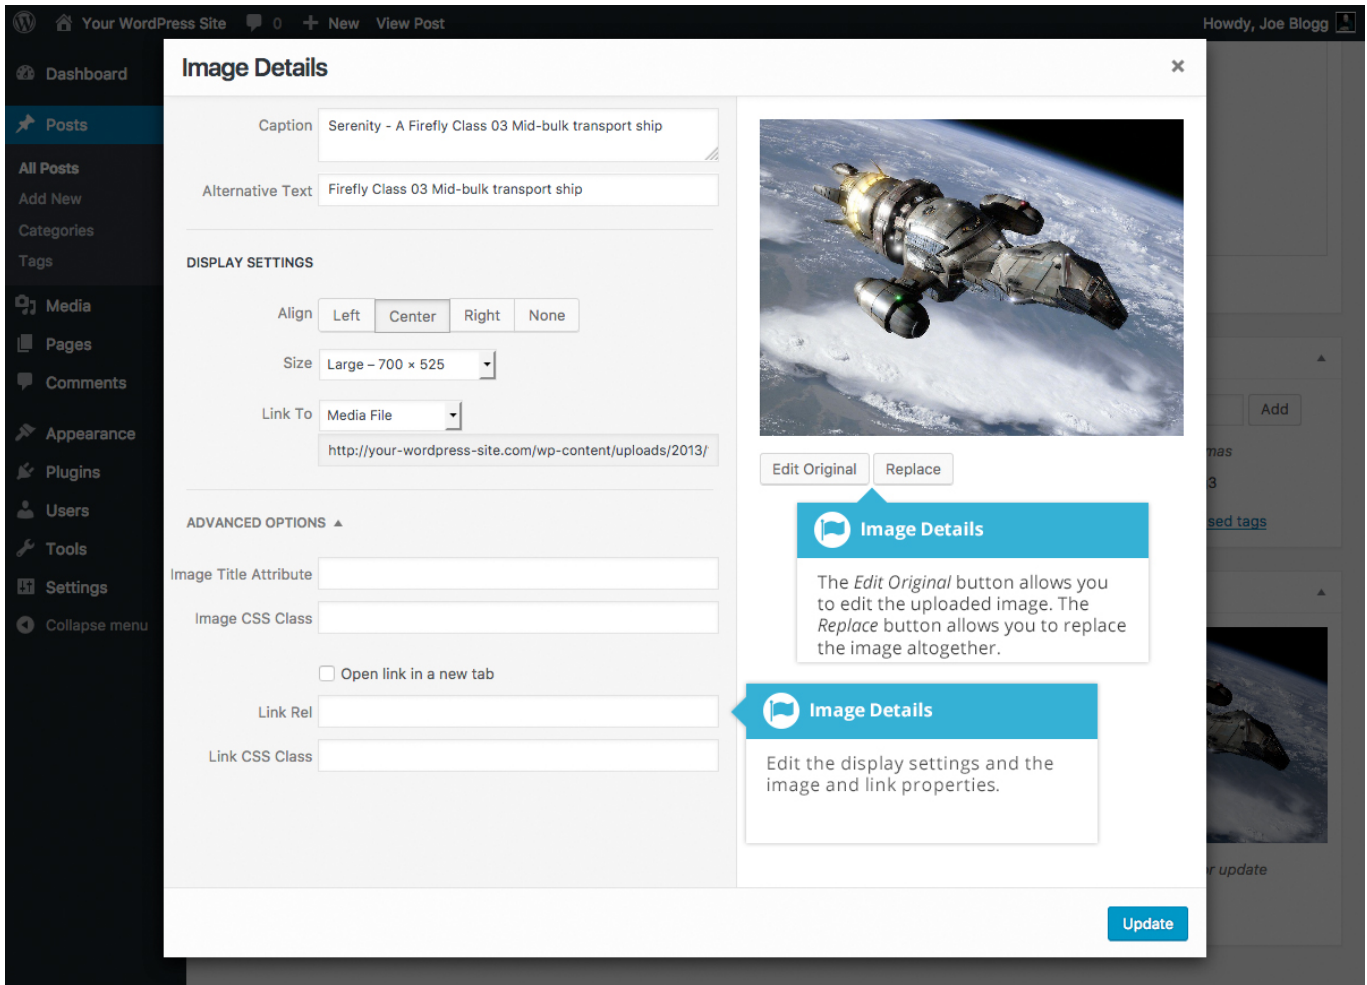

Align, Edit or Delete Image
Click on the image to display the image toolbar. Resize handles will also be seen around the edge of the image.

After clicking the *Edit* button () the following pop-up window will appear.

The Image Details pop-up window allows you to edit the various image and link properties:

- **Caption** – Displayed underneath the image as a short description. How this displays will be dependent on the WordPress theme in use at the time. You can also include basic HTML in your captions
- **Alternative Text** – Displayed when the browser can't render the image. It's also used by screen readers for visually impaired users so it's important to fill out this field with a description of the image. To a small degree, it also plays a part in your website Search Engine Optimisation (SEO). Since search engines can't 'read' images they rely on the Alt Text
- **Align** – Allows you to select how you would like the image aligned. They can be either Left, Centered or Right aligned. Setting alignment to None will

remove the other alignment settings. How this affects your image within your content will depend on the current theme in use

- **Size** – Select a specific size from the dropdown list or select ‘Custom Size’ and then enter the Width and Height (in pixels) in the input fields that appear
- **Link To** – Select where you would like to link your image to from the dropdown list. You have the choice of linking to the image attachment page by selecting *Attachment Page*, or you can link to the full size image by selecting *Media File*. You can also link to any URL by selecting *Custom URL*. When you do this, a new field will appear that allows you to enter in the custom URL. You can also choose not to link to anything by selecting *None*
- **Image Title Attribute** – Displayed as a tooltip when the mouse cursor hovers over the image in the browser
- **Image CSS Class** – By default, WordPress will assign several CSS Classes to your image. If, for some reason, there’s other CSS Classes that you’d like to assign to your image then you can add them into this input field
- **Link Rel** – Describes the relationship from the current document to the specified link. More information on the rel HTML attribute can be found on [Wikipedia](#)
- **Link CSS Class** – If there is a specific CSS Class that needs to be set on the HTML link then you can add it into this input field

Clicking the *Edit Original* button allows you to perform some simple manipulation with your uploaded image. You’re able to rotate and flip your image as well as scale and crop it to different sizes.

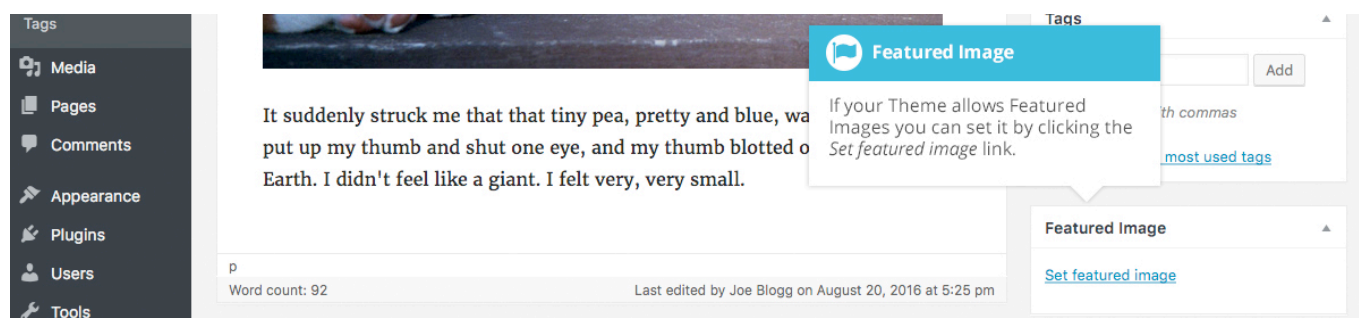

If you’d like to replace the image entirely, click the *Replace* button and you’ll be shown your Media Library where you can select a new image.

Once you have updated the image properties, click the *Update* button to save your changes. Alternatively, click the small ‘x’ in the top-right of the pop-up window to close the pop-up without saving any changes.

Setting a Featured Image

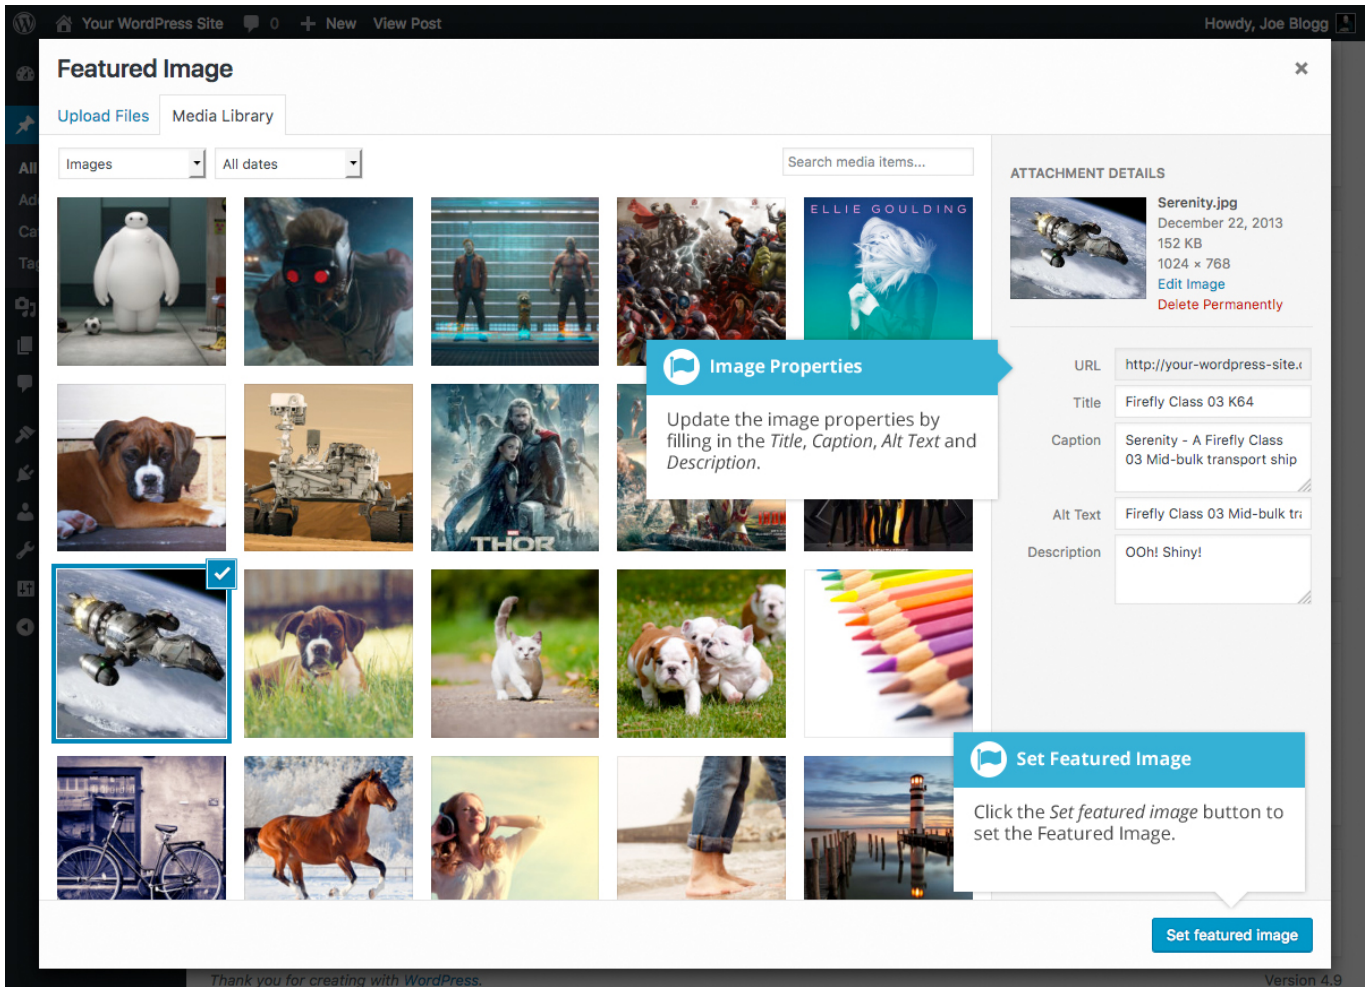

Some themes allow you to specify a Featured Image for your Page and Post. A Featured Image, often called a Post/Page Thumbnail, is usually some sort of image that is representative for that particular Page or Post. How these images are displayed is dependent entirely on the Theme that is currently in use.

If your Theme allows you to set a Featured Image, the following *Featured Image* panel will be displayed when you're editing your Page or Post. If Featured Images can't be set then this panel won't be displayed.

Setting your featured image is very similar to adding an image into your Page or Post. After clicking the *Set featured image* link a pop-up window will display that looks similar to the one that displays when you add an image to your Page/Post. You can upload a new image to use as your Featured Image or you can simply choose from one of your previously uploaded images.

By default, you'll be shown a list of the previously uploaded images. If you'd like to upload a new image, click on the *Upload Files* link at the top of the pop-up window. After clicking the image you'd like to use as your *featured image* you can then update the Title, Caption, Alt Text and Description. To set the image as your Featured Image, click the *Set featured image* button. Your chosen image will then appear in the *Featured Image* panel.

Insert an Image Gallery

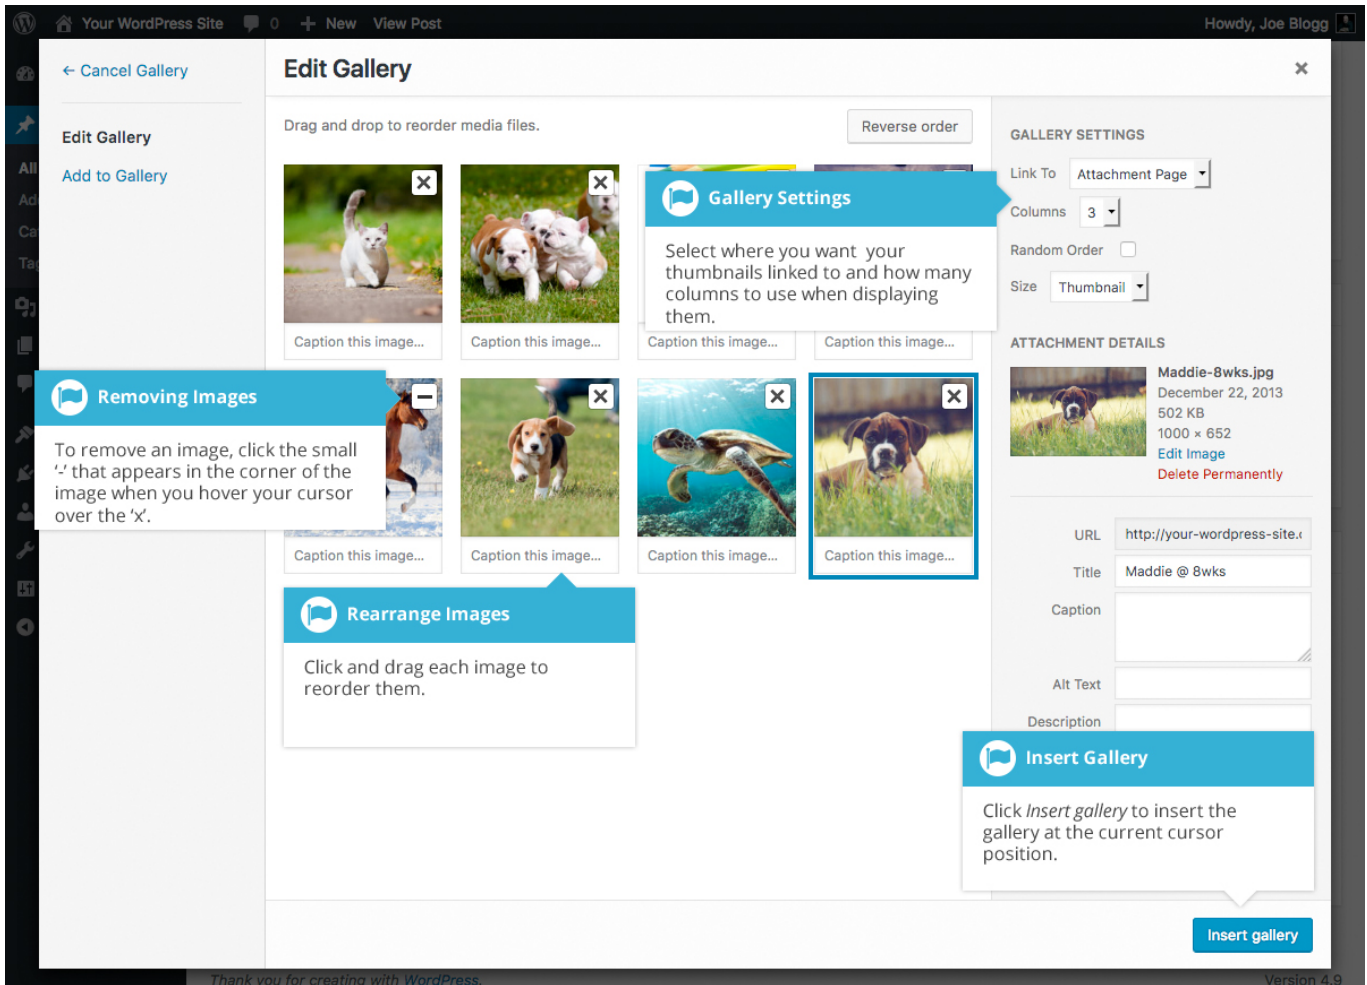

WordPress has its own simple built-in Image Gallery that allows you to add multiple images to a page in one easy step.

To insert an image gallery into your Page/Post, click the *Add Media* button

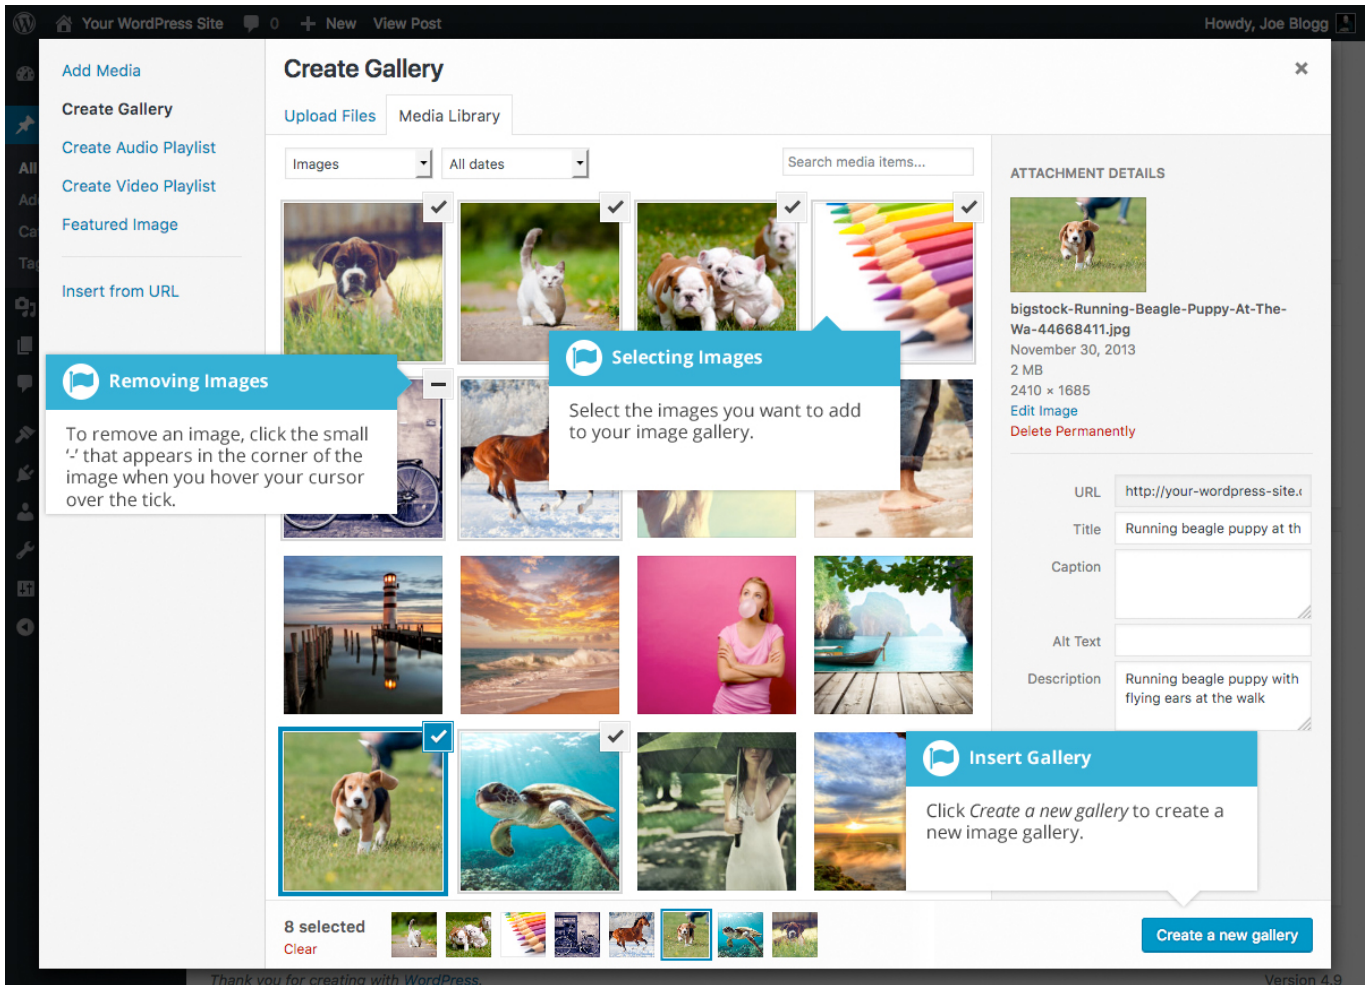

( **Add Media**). A pop-up window will display that looks the same as the one that displays when you add an image to your Page/Post. You can upload new images to use in your gallery or you can simply choose from your previously uploaded images.

By default, you'll be shown a list of your previously uploaded images. If you'd like to upload a new image, click on the *Upload Files* link at the top of the pop-up window.

Click the *Create Gallery* link in the left-hand navigation then select the images that you'd like to insert into your gallery.

After selecting your images, click the *Create a new gallery* button at the bottom of the pop-up window. The window will change so that only the selected images are shown.

All the images that appear will be used within your Image Gallery. To reorder the images simply click on an image and drag it to its new position. If you'd like to add captions to your images, click the '*Caption this image..*'. text below each image and then type in your caption. Alternatively, click each image and then update the Title, Caption, Alt Text and Description on the right-hand side of the pop-up window. You can also include basic HTML, such as links, in your captions.

If you decide you no longer want a certain image to appear in your gallery, click the small '-' that appears in the top right corner of the image when you hover your cursor over the 'x'.

Since the built-in gallery is quite simple, there aren't that many options to choose from when setting it up.

- **Link to** – This sets what happens when the thumbnail image is clicked. Selecting *Media File* will open the full size image directly in your browser

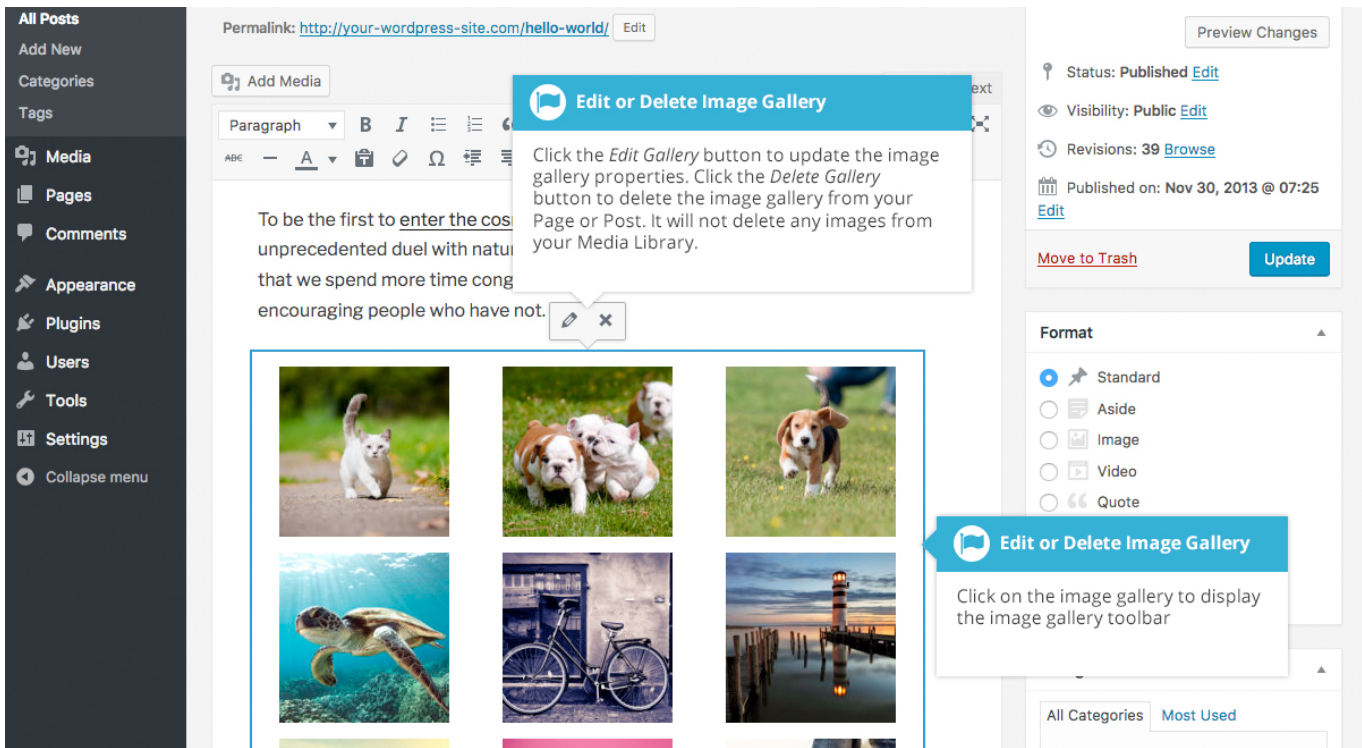

window. Selecting *Attachment Page* will open the image within one of your WordPress formatted pages

- **Columns** – Specifies the number of columns to use when displaying your thumbnail images. Ultimately, this will be dependent on your Theme and how wide your page is. If you find the gallery isn't displaying properly after changing this number you may need to change it to another number
- **Random Order** – Click this checkbox to display your images in a random order
- **Size** – Selects the size of the image to use in your gallery

Edit or Delete an Image Gallery

Editing or Deleting an Image Gallery is much like editing or deleting an image. After clicking on an Image Gallery that has been inserted into your Page or Post,

two icons will appear on top of the gallery. Clicking the *Edit* button () allows you to edit the image gallery properties. Clicking the *Remove* button () will delete the image gallery from your content. It will only remove the image gallery from your Page or Post, it will not delete any images from your Media Library.

After clicking the *Edit* icon you will be shown the same pop-up window and options as when your image gallery was inserted into your Page/Post.

Insert an Audio or Video Playlist

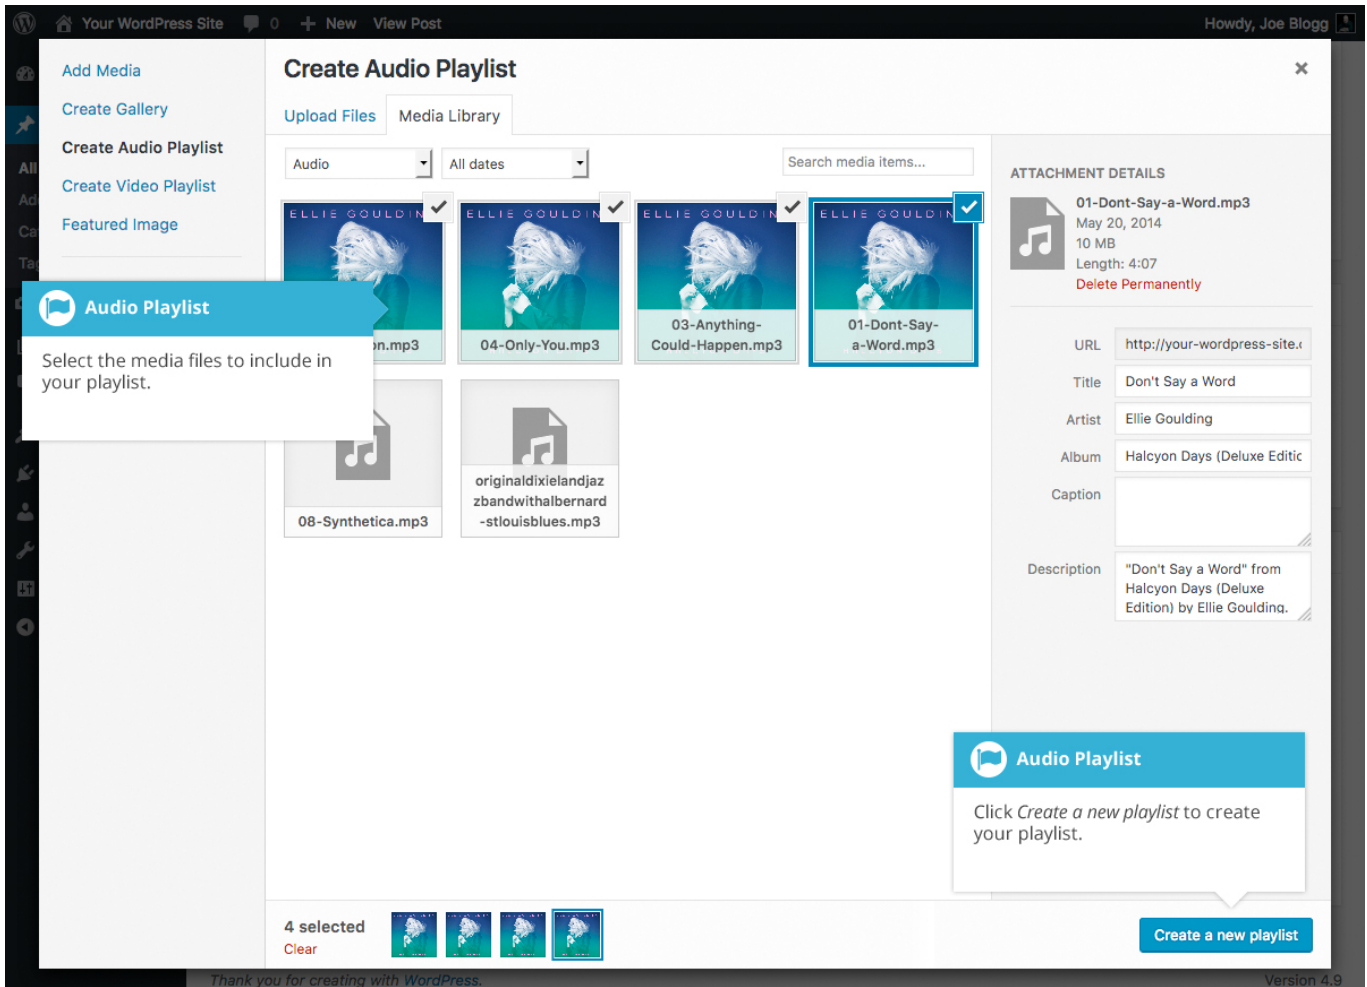

Inserting an audio or video playlist is almost identical to inserting an image

gallery. Click the *Add Media* button (). A pop-up window will display that looks the same as the one that displays when you add an image to your Page/Post. You can upload new media files to use in your playlist or you can simply choose from your previously uploaded files.

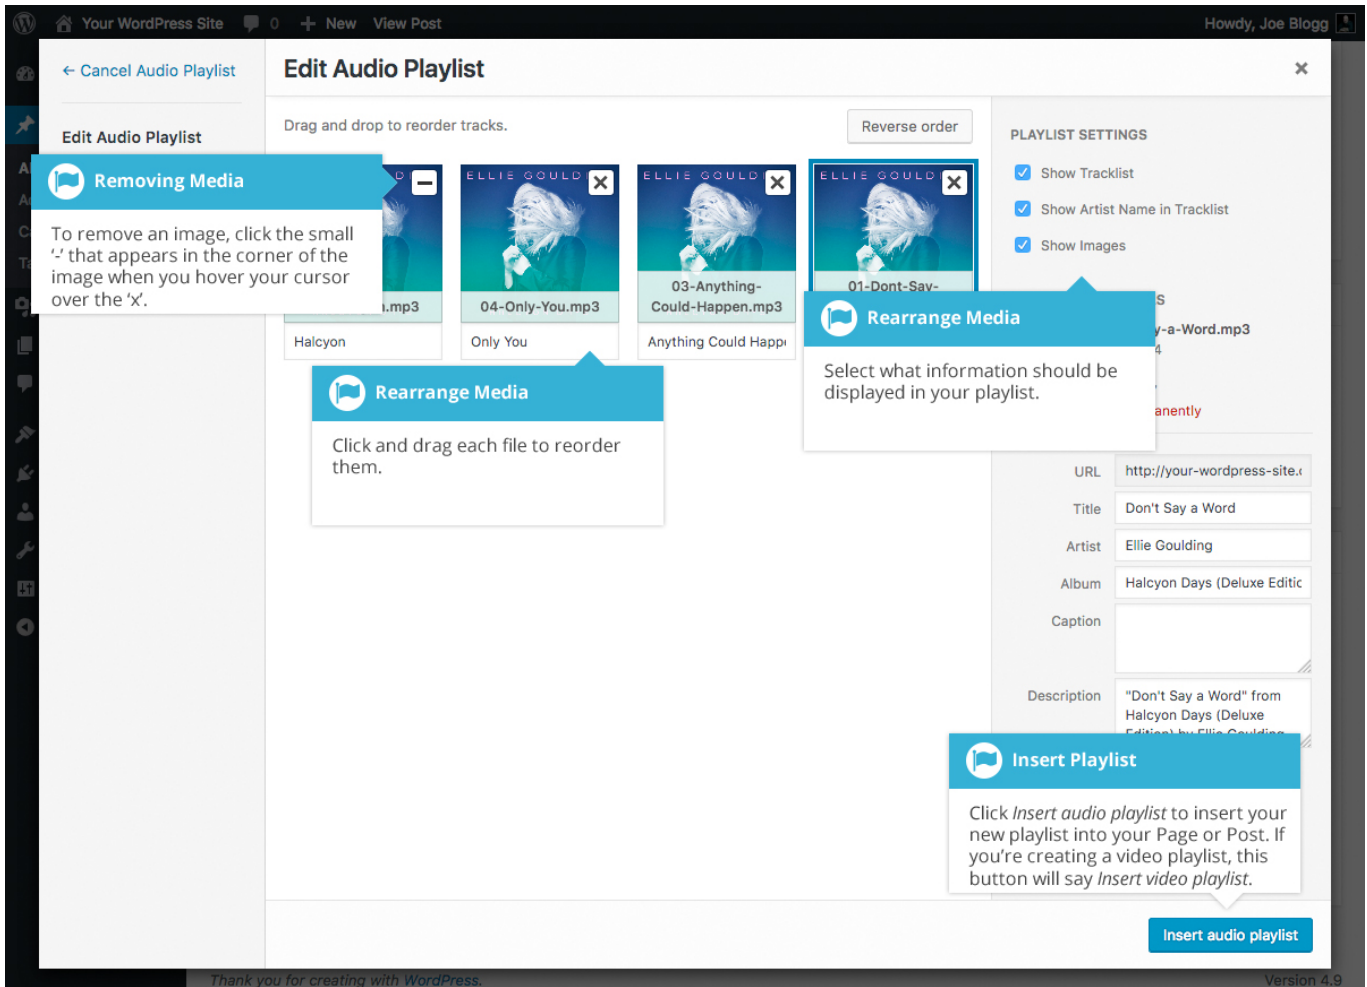

By default, you'll be shown a list of your previously uploaded files. If you'd like to upload a new media file, click on the Upload Files link at the top of the pop-up window.

To create an audio playlist, click the *Create Audio Playlist* link in the left-hand navigation. The pop-up window will display a list of your audio files.

Alternatively, to create a video playlist, click the *Create Video Playlist* link in the left-hand navigation. The pop-up window will display a list of your video files.

After selecting your media files, click the *Create a new playlist* button at the bottom of the pop-up window. The window will change so that only the selected media files are shown.

All the media files that appear will be used within your playlist. To reorder the files simply click on a file and drag it to its new position. You can change the title for each file by clicking the text below each file and then typing in your new title. Alternatively, click each file and then update the *Title*, *Caption* and *Description* on the right-hand side of the pop-up window.

If you decide you no longer want a certain media file to appear in your playlist, click the small '-' that appears in the top right corner of the file when you hover your cursor over the 'x'.

You can change how your playlist appears in your page by selecting which items you'd like to appear.

When inserting an audio playlist you have the following display settings.

- **Show Tracklist** – Ticking this checkbox will show a list of all the audio files within your playlist

- **Show Artist Name in Tracklist** – Ticking this checkbox will show the artists name next to each track name
- **Show Images** – Ticking this checkbox will show any associated audio file images

When inserting a video playlist you have the following display settings.

- **Show Video List** – Ticking this checkbox will show a list of all the video files within your playlist
- **Show Images** – Ticking this checkbox will show any associated video file images

Inserting Video, Audio or Other File Type

The procedure for inserting any other type of file into your Page/Post is exactly the same as Inserting an Image. Simply click the *Add Media* button ( Add Media). Once the relevant pop-up window displays, perform the same steps to upload your file to your site and to insert it into your Page or Post.

When inserting video or audio files, you can select *Embed Media Player* from the *Embed or Link* dropdown list in the Insert Media pop-up window to use the audio and video players that are now built into WordPress. Supported audio/video formats include M4a, MP4, OGG, WebM, FLV, MP3, and WAV files.
